Welcome and introduction

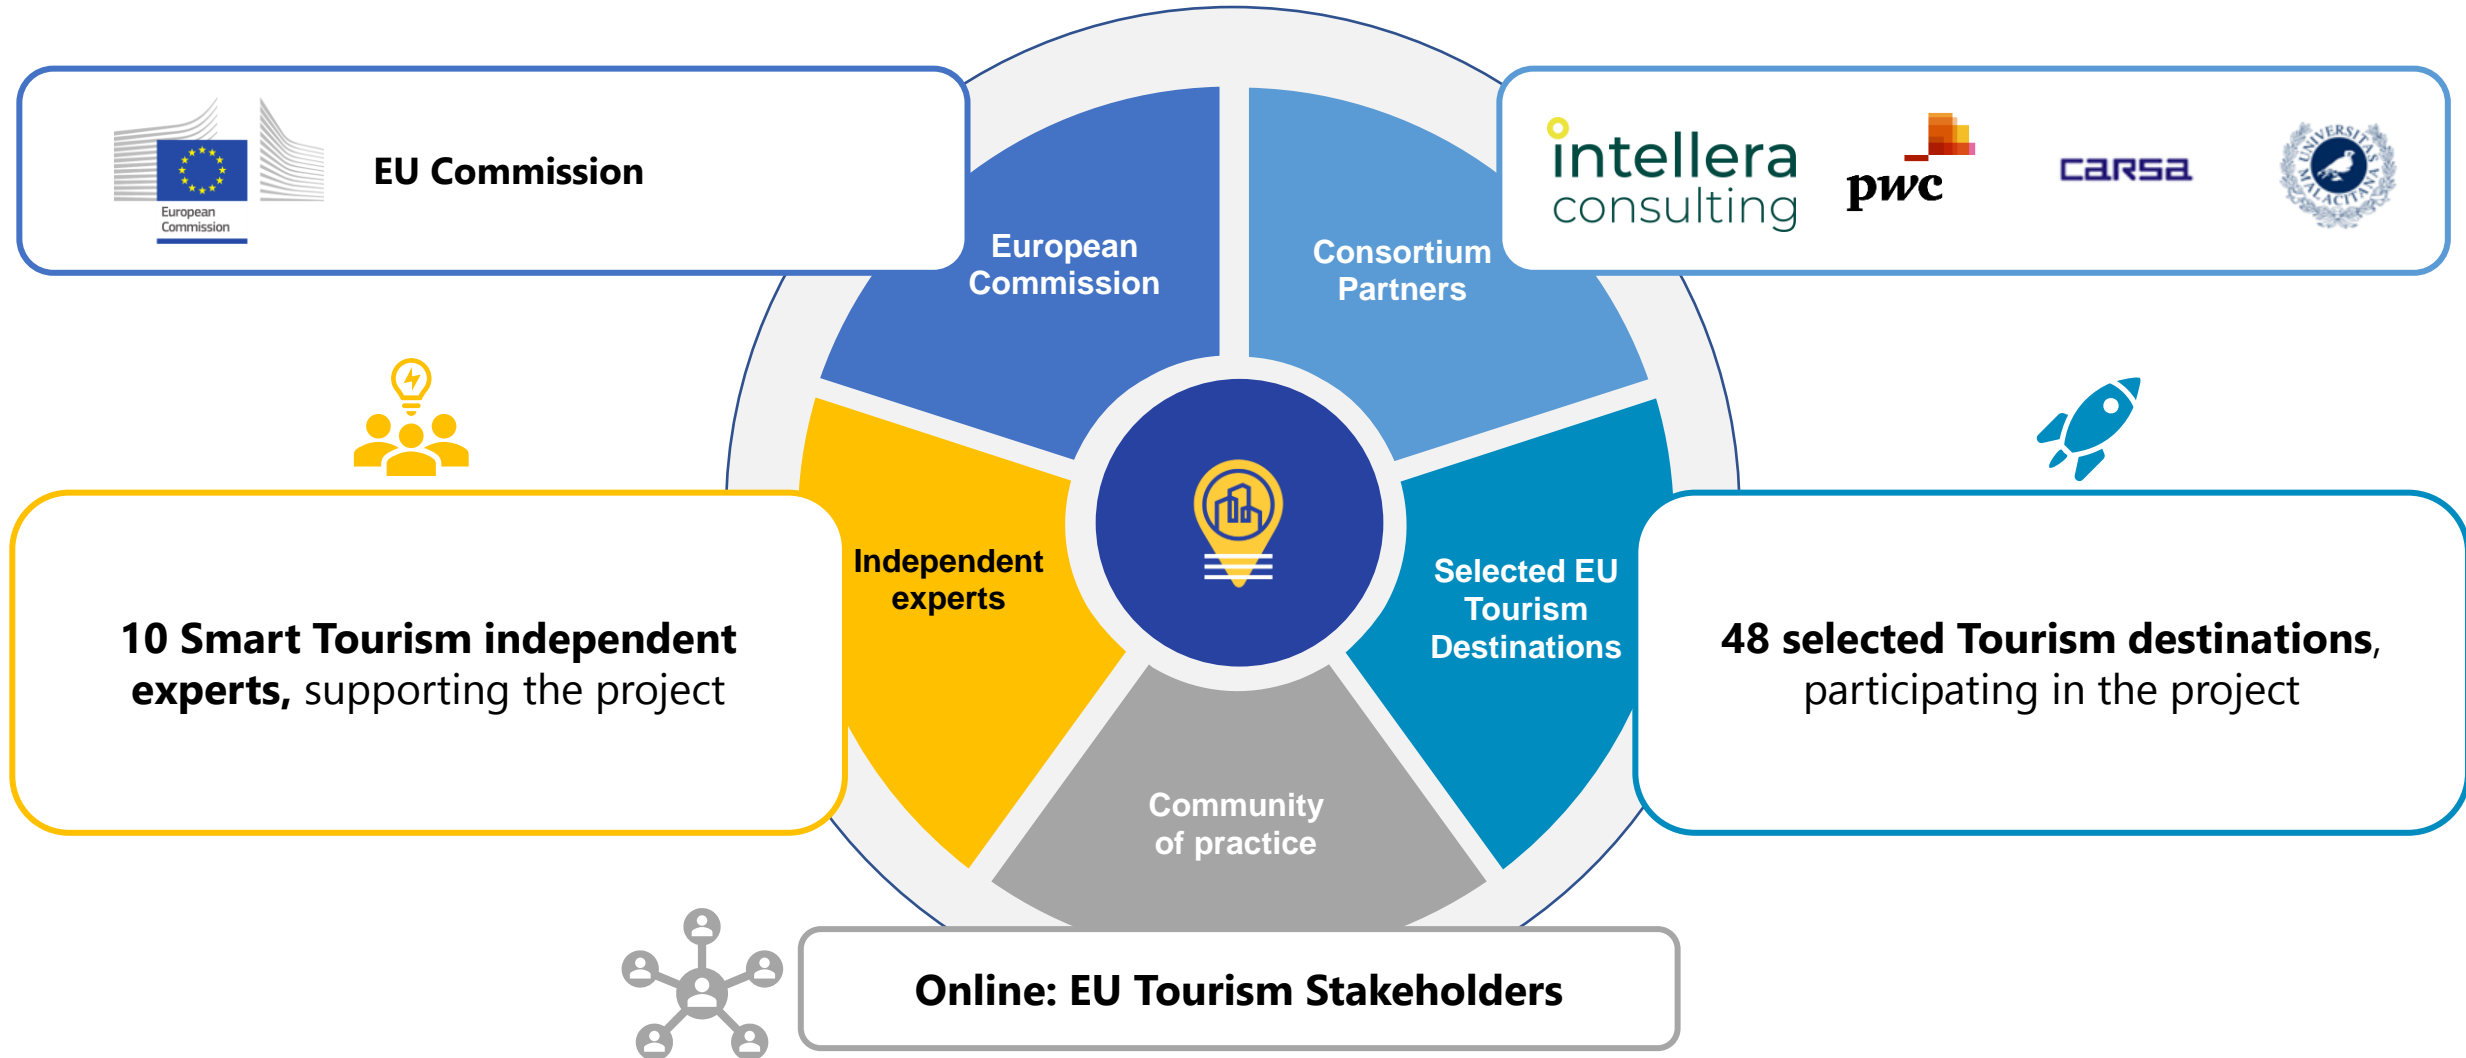

Giovanna Galasso

Project Leader

Intellera Consulting, Associate Partner

Smart Tourism Destinations – Who is here today

Agenda – 19 September 2022

14:30 – 14:40 **Welcome address & Agenda presentation**

Giovanna Galasso, Intellera Consulting, Project Leader and Event Moderator

14:40 – 15:00 **The Smart Tourism Destinations Initiative**

*Marie-Hélène Pradines, Head of Unit, DG GROW
Misa Labarile, Policy Officer, DG GROW*

15:00 – 15:20 **Digital Europe Programme for Smart Cities and Communities**

Javier Orozco-Messana, Project Officer, DG CNECT

15:20 – 15:40 **Intelligent Cities Challenge**

*Dana Eleftheriadou, Team Leader - Proximity and Cities, DG GROW
Natalia Gkiaouri, Policy Assistant, DG GROW*

15:40 – 16:10 **Final Results of the study 'Mastering data for tourism by EU destinations'**

*Carlo Montino, Intellera Consulting
Alfonso Cerezo Medina, UMA*

16:10 – 16:30 *Coffee Break*

16:30 – 16:45 **Overview of Activities of the Destinations' Journey and Community of Practice**

*Costanza Bersani, Intellera Consulting
Silvia de la Maza, CARSA*

16:45 – 17:45 **Panel of experts. Best practices and tips in smart data management in Tourism**

*Moderator: Tomáš Gajdošík
Panelists: Mirko Lalli, Dagmar Lund-Durlacher, Dolores Ordóñez*

17:45 – 18:00 **Q&A Session and Closing Remarks**

Giovanna Galasso, Intellera Consulting, Project Leader and Event Moderator

What's our objective today?

This event marks **the beginning of the capacity building journey** for the selected Smart Tourism Destinations, but it is also a chance to **start disseminating knowledge to the wider EU tourism community**. To do so, today's event is pursuing the following goals:

Sustain and foster the development of a **data-driven community** active in the Tourism sector in the European Union

Raise awareness and share the **latest policies and initiatives of the European Commission** in the field of Smart Tourism

Present to you the **first results coming from our project** and **kick-off our upcoming activities**, including opportunities for external stakeholders

The Smart Tourism Destinations project

Promoted by the **European Commission - DG GROW**, the Smart Tourism Destinations Project is managed by **Intellera Consulting**, **CARSA**, the **University of Malaga**, and **PwC EU Services**.

The project aims to **support EU destinations implementing data-driven approaches to make tourism more sustainable and accessible**.

The project can also count on the support of **10 independent experts** including private sectors practitioners and academic researchers.

SELECTED DESTINATIONS

48 Destinations have been selected to be part of the Project, having the possibility to **learn from experts and peers** and work on **their Smart Tourism Destination's Roadmap**.

Smart Tourism Destinations – Objectives

The key objectives of the Smart Tourism Destinations project

Strengthen collaboration and peer learning between EU tourism destinations

Develop a knowledge base and provide **capacity building activities** to support the adoption of Smart Tourism solutions and approaches

Disseminate lessons learnt and good practices, raise awareness on Smart Tourism and develop **final recommendations**

To achieve these goals, **we will work together** with the independent experts, the selected destinations, and involve the wider community of stakeholders in a series of **capacity building and knowledge sharing activities**.

Key tools developed by the project are already available on our project website!

Key tools

Study “Mastering data for tourism by EU destinations”

Knowledge base on how data is being used by destinations and other actors in the tourism industry

Available on our website

EU Guide on data for tourism destinations

A concise guide to disseminate the basic concepts on data management for smart tourism

Available on our website

Mastering Data: A Toolkit for Tourism Destinations

A toolkit for mastering data, describing how to improve destination’s smart tourism capacities

Soon available on our website

Smart Tourism: The European Commission policies and initiatives

European Commission

SMART
TOURISM
DESTINATIONS

Tourism policy @EU level – For the Smart Tourism Destinations Pilot project

Tourism policy @EU level

For the Smart Tourism Destinations pilot project

Misa Labarile, GROW G1, Tourism

Transition pathway for tourism, Feb 2022

- Policy and governance
- Green transition
- Digital transition
- Resilience
- Funding
- Monitoring and co-implementation

Transition Pathway report at EU Publications Office portal:
<https://op.europa.eu/s/vNbN>

70 actions grouped under key topic areas

Digital transition

Data-driven tourism services
Clear online information offer
R&I for digital tools and services
Interoperable data space for tourism
Digitalisation of SMEs and destinations

Green transition

Circular tourism services
Sustainable mobility
Companies reducing environmental impacts
R&I projects and pilots on sustainable tourism
Experimenting environmental footprint methods for tourism

Collaborative and smart destination governance

Comprehensive tourism strategies

Expanding tourism indicators

Multimodal travelling

Short-term rentals

Networking,
Best practice sharing

Awareness raising
(skills needs, transition benefits)

One-stop-shop to
resources (skills, funding)

Facilitating travelling (cross-border, coordinated rules sharing)

Skills and education development

Fair and good quality jobs

Accessible tourism services

Diversification of tourism services,
including resident perspective

Policy & governance

Stakeholder support

Skills & resilience

Tell us what you do

[Pledges \(europa.eu\)](https://europa.eu)

Working for a data-driven sector

- A Code of Conduct for contractual agreements in data sharing in tourism
- Preparatory work to develop a tourism data space, funded under the Digital Europe Programme
- A Study, a EU Guide, and a Toolkit for destinations to develop a smart data strategy

And a [Pact for Skills](#) to support upskilling in tourism

Competitions for destinations

- [EU Capital of Smart Tourism](#) – currently selecting our 2023 winners
- [European Destinations of Excellence Awards \(EDEN\)](#) – currently selecting our 2023 winner

- Data Space for Smart Cities and Communities
- Local Data platforms
- Local Digital Twins

THE DATA ACT

Unlocking data value for the economy and society

“I want European businesses and our many SMEs to access high quality data and create value for Europeans – including by developing Artificial Intelligence applications.”

*Thierry Breton,
Commissioner for the Internal Market*

- EU Green Deal & Europe Fit for the Digital Age: *‘Twin green and digital transitions’* ; need to tackle the twin challenge in a holistic and systemic way
- Smart cities and communities use digital technologies to reduce resource input and improve the quality of life for their citizens (- > *‘twin digital and green’ transition*)
- European Digital Strategy:
 - Shaping Europe’s Digital Strategy
 - Excellence and Trust in Artificial Intelligence
 - European Data Strategy
- **2030 Digital Compass: the European way for the Digital Decade**
- EU Recovery Plan:
 - At least 20% of the funds under the Recovery and Resilience Facility will be made available for the digital transition (and 30% for green)

A Europe fit for the digital age

Empowering people with a new generation of technologies

**Smart cities and communities - >
‘twin digital and green’ transition**

State of play

- Many initiatives, pilot projects, innovative solutions but often confined to a specific vertical domain of the city (e.g. energy management or mobility)
- Digital solutions often stay fragmented, which limits the possibility to scale, accelerate take-up and deliver better outcomes & create a viable smart city market in Europe
- Despite advances in data capture and management, just 12% of city data is used for policy making

- Political context
- **Living-in.EU movement**
- Data Space for Smart Cities and Communities
- Local Data platforms
- Local Digital Twins

LIVING-IN.EU

The European way of digital transformation
in cities and communities

*Over 100 signatures so far...
From Mayors, Regional and national Ministers*

<https://www.living-in.eu/>

Principles:

- Citizen-centric design
- A city-led approach at EU level
- Technologies as key enablers
- Socially responsible access, use, sharing and management of data
- City as an open, living space
- Interoperable urban platforms with open standards, open/public APIs and shared data models

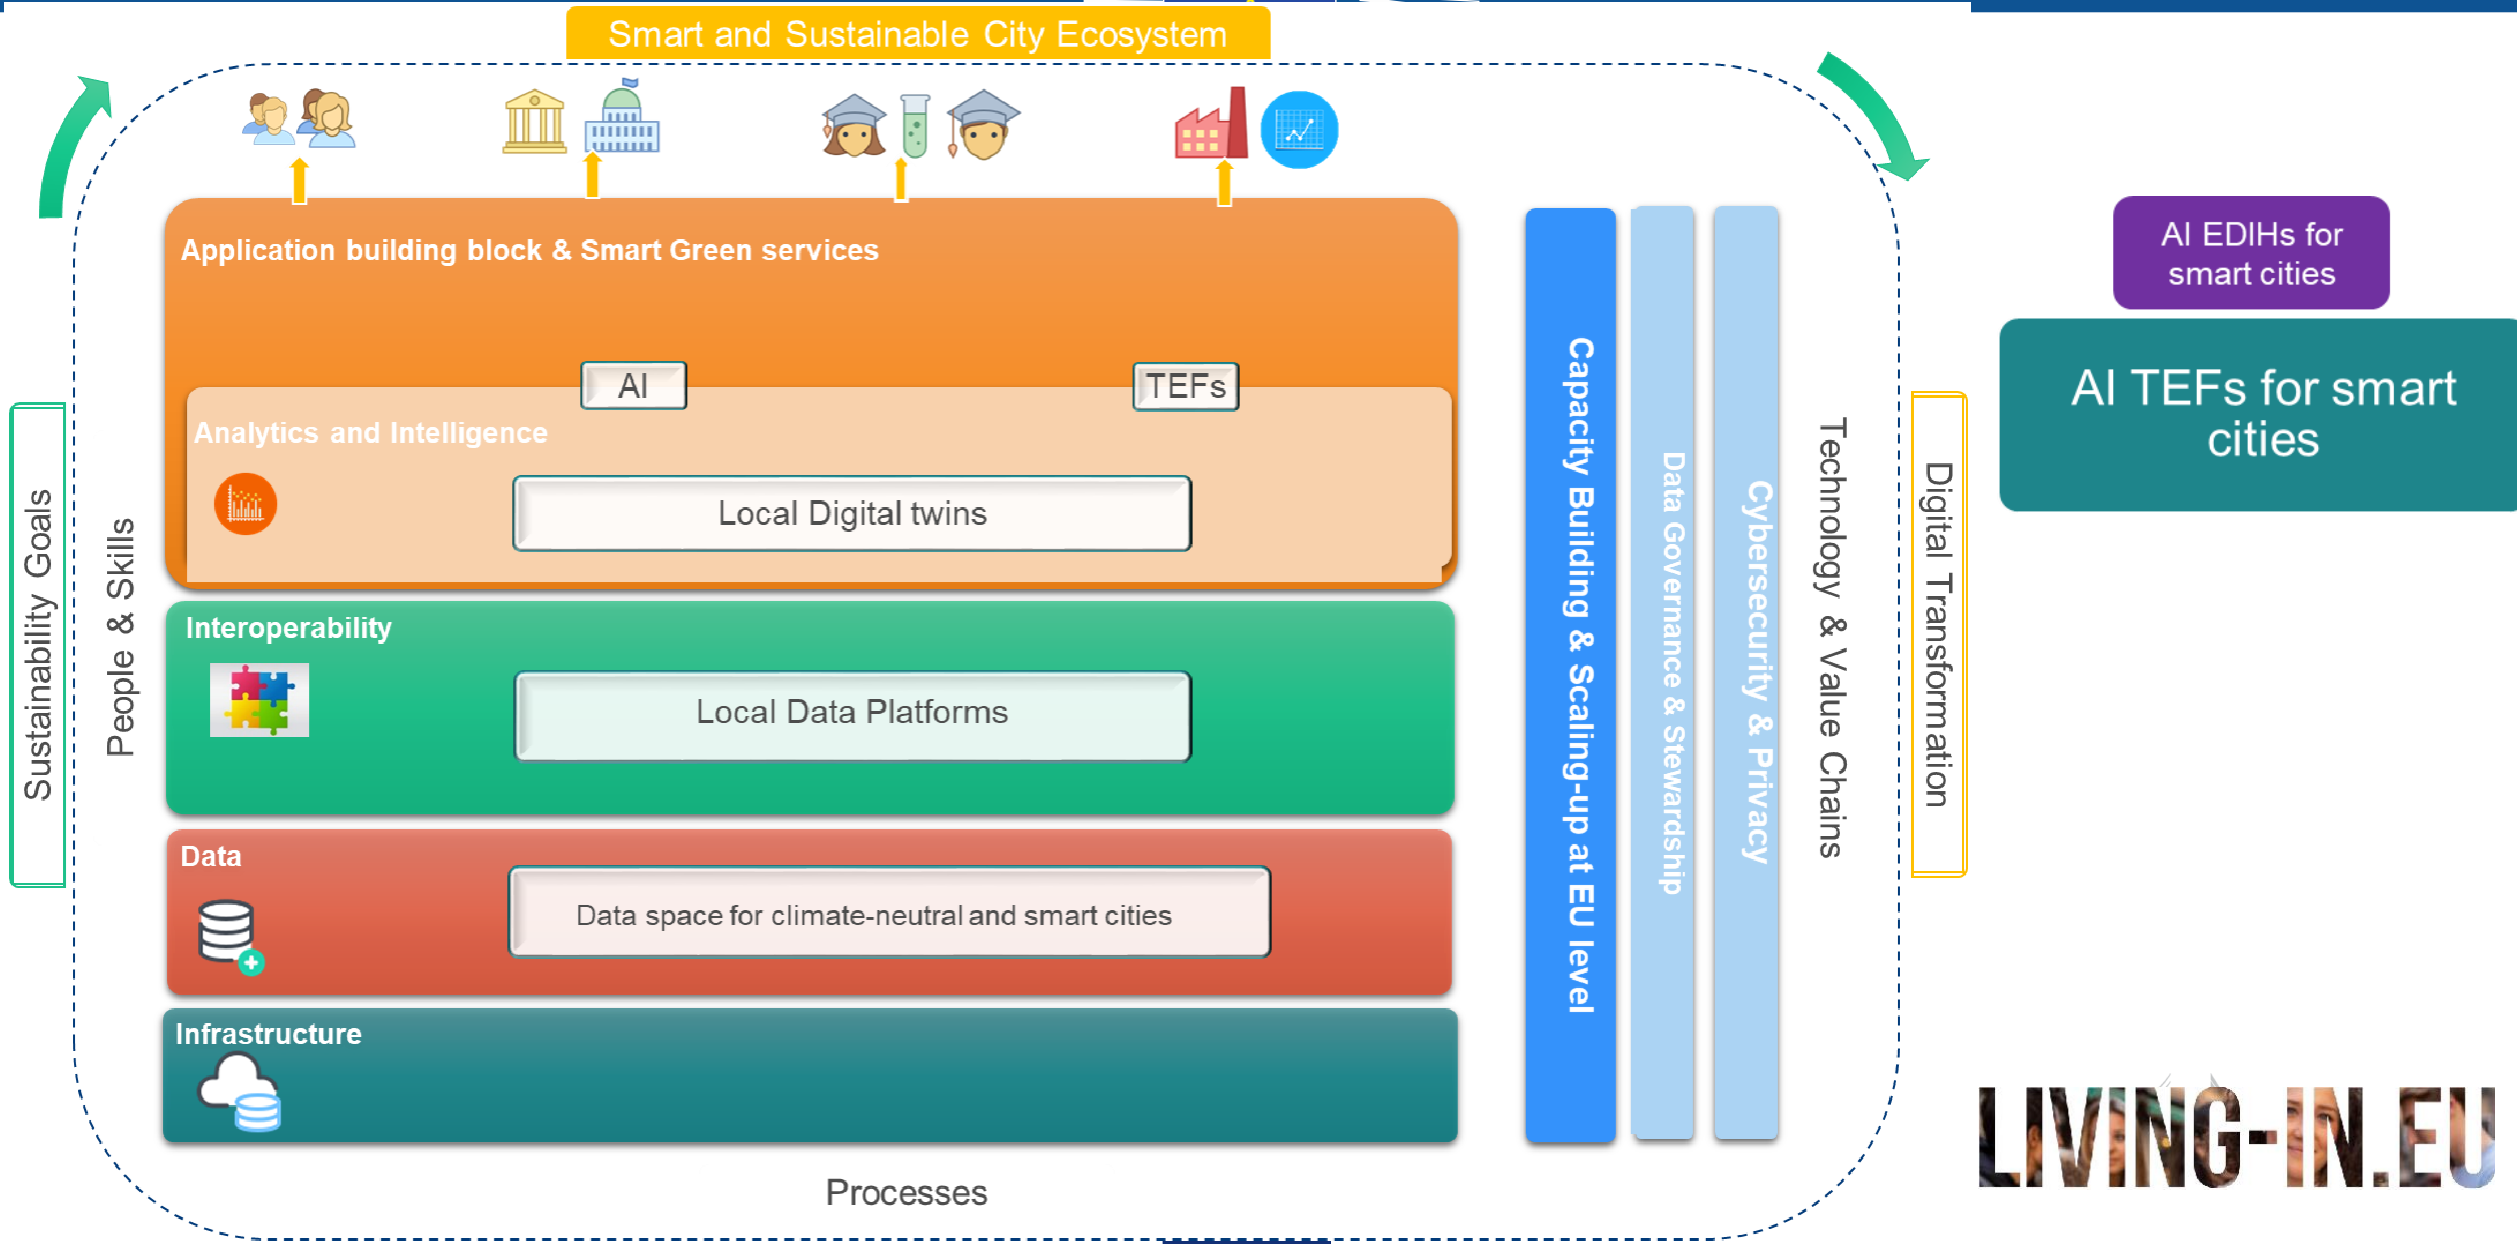

Multi-level governance

European Commission & Committee of the Regions, Finnish Presidency, EUROCITIES, OASC (Open & Agile Smart Cities), ENoLL (European Network of Living Labs), Digital Transition Partnership and cities

▪ **Commitments:**

- Financial
- Technical
- Legal
- Education & Capacity building
- Monitoring and measuring
- Steering Board

Digital capacity building for cities and communities

- Political context
- Living-in.EU movement
- **Data Space for Smart Cities and Communities**
- Local Data platforms
- Local Digital Twins

Rationale

- Access to public, but sensitive data (for analytics/AI) – Data Governance Act
- Access and reuse of private data with public interest (B2G data sharing) – Data Act
- European cities need to ensure citizens' digital rights (personal data management)
- Smart cities strive for portable and affordable, innovative cross-sector services (city-to-city & cross-border)

Rollout of common
European data spaces

in crucial economic sectors and domains of public interest, looking at data governance and practical arrangements.

Data space: interoperable and secure environment, where currently fragmented and dispersed data can be shared among those, who become part of this data space based upon voluntary agreements and under certain conditions

Challenges – I.

- Open data paradigm helped to increase transparency, citizen engagement and create innovative services, but the data cities need is often not open data

Amsterdam	Copenhagen	London	Paris	Vienna
Transportation	Geospatial	Demographics	Transportation	Transportation
Tourism & Culture	Transportation	Employment	Administration	Environment
Health	Children & adolescents	Health	Culture	Geospatial
Urban development	Statistics	Transparency	Urban development	Administration
Environment		Housing		

Open data domains with the most datasets

- Difficult to access public, but sensitive / not open data (for analytics/AI) – see Data Governance Act

Challenges – II.

- Difficulty to access and reuse of private data with public interest (B2G)

Current operational models
do not scale up

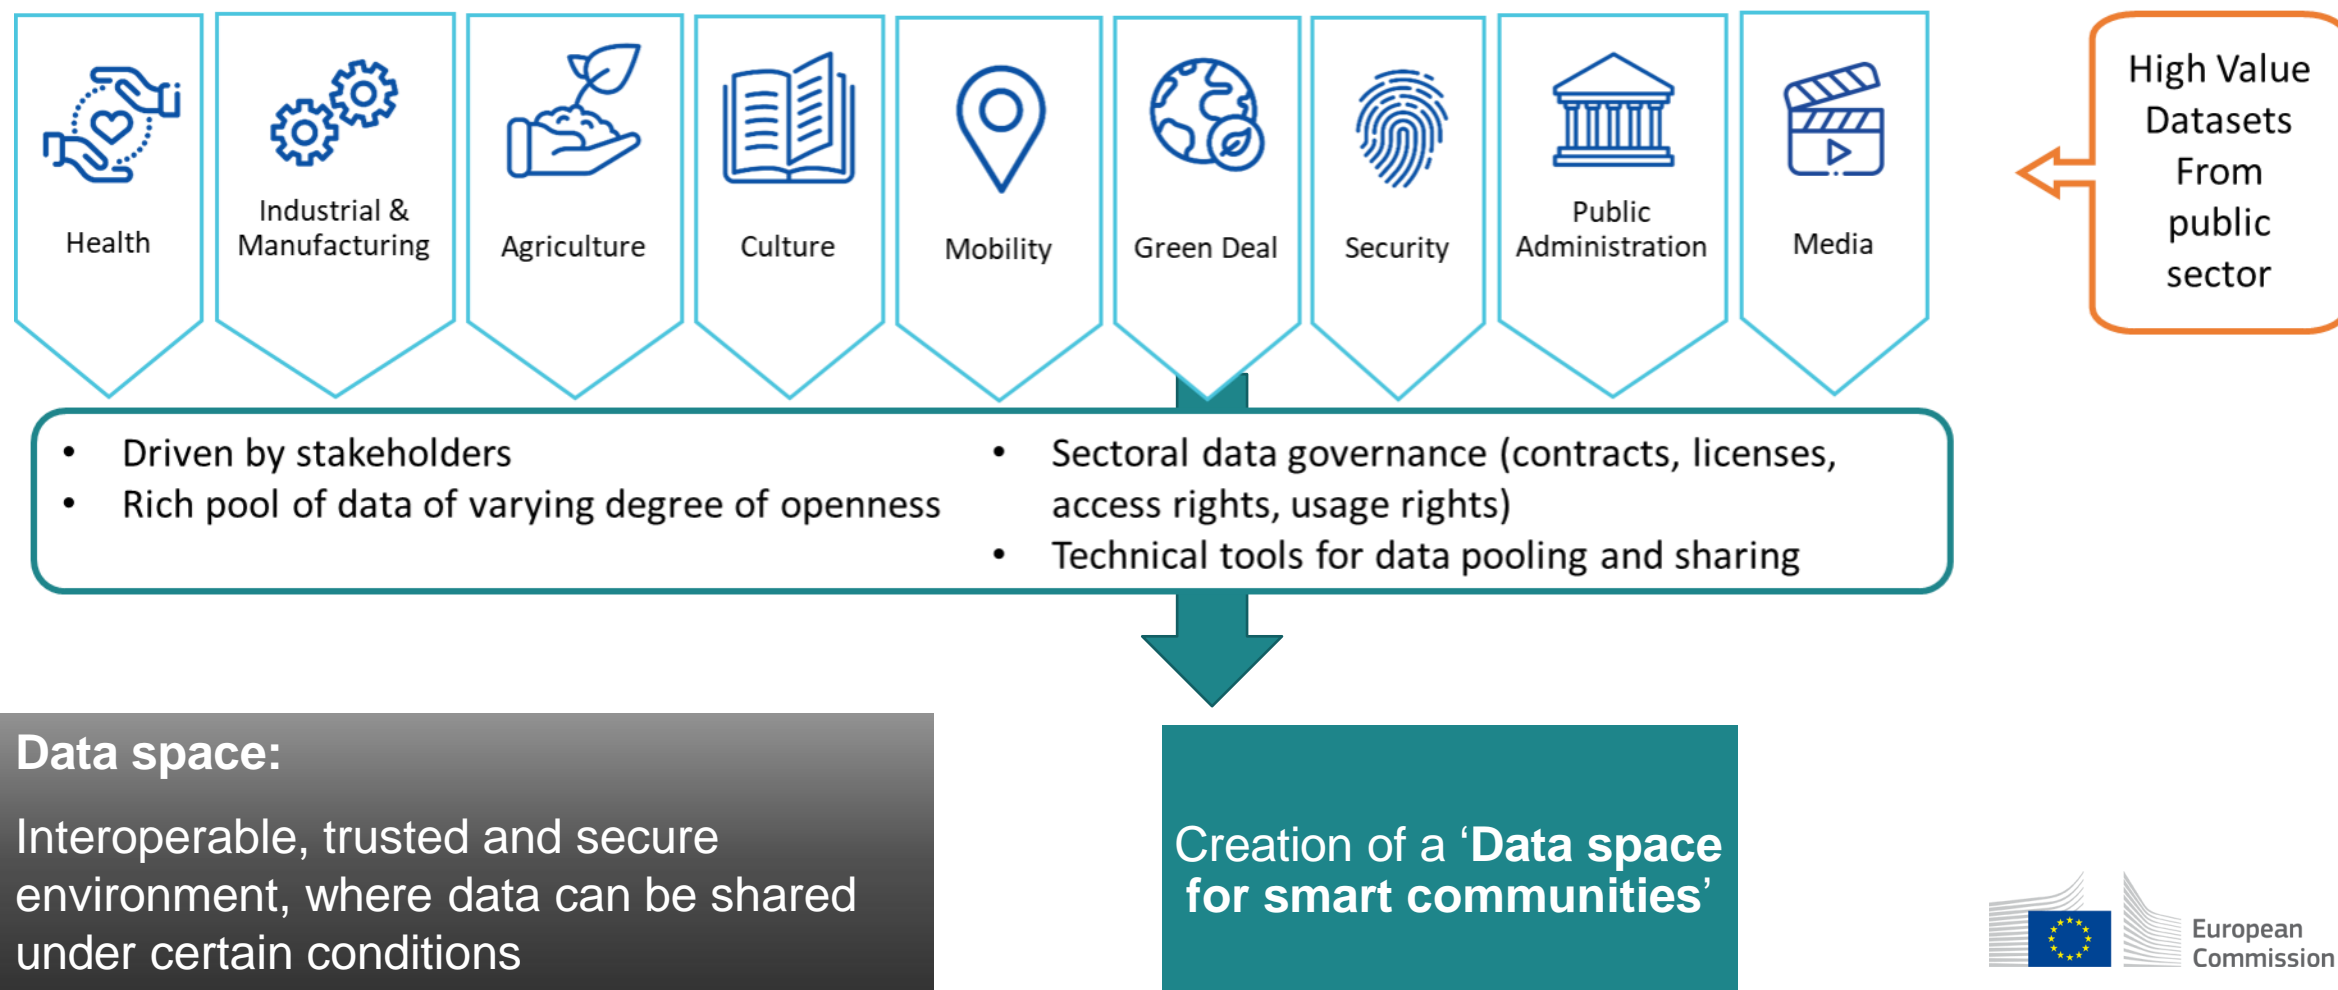

'More secure and regular data sharing across the EU could help public administrations use private sector data for the public good.'
(High-Level Expert Group on B2G Data Sharing)

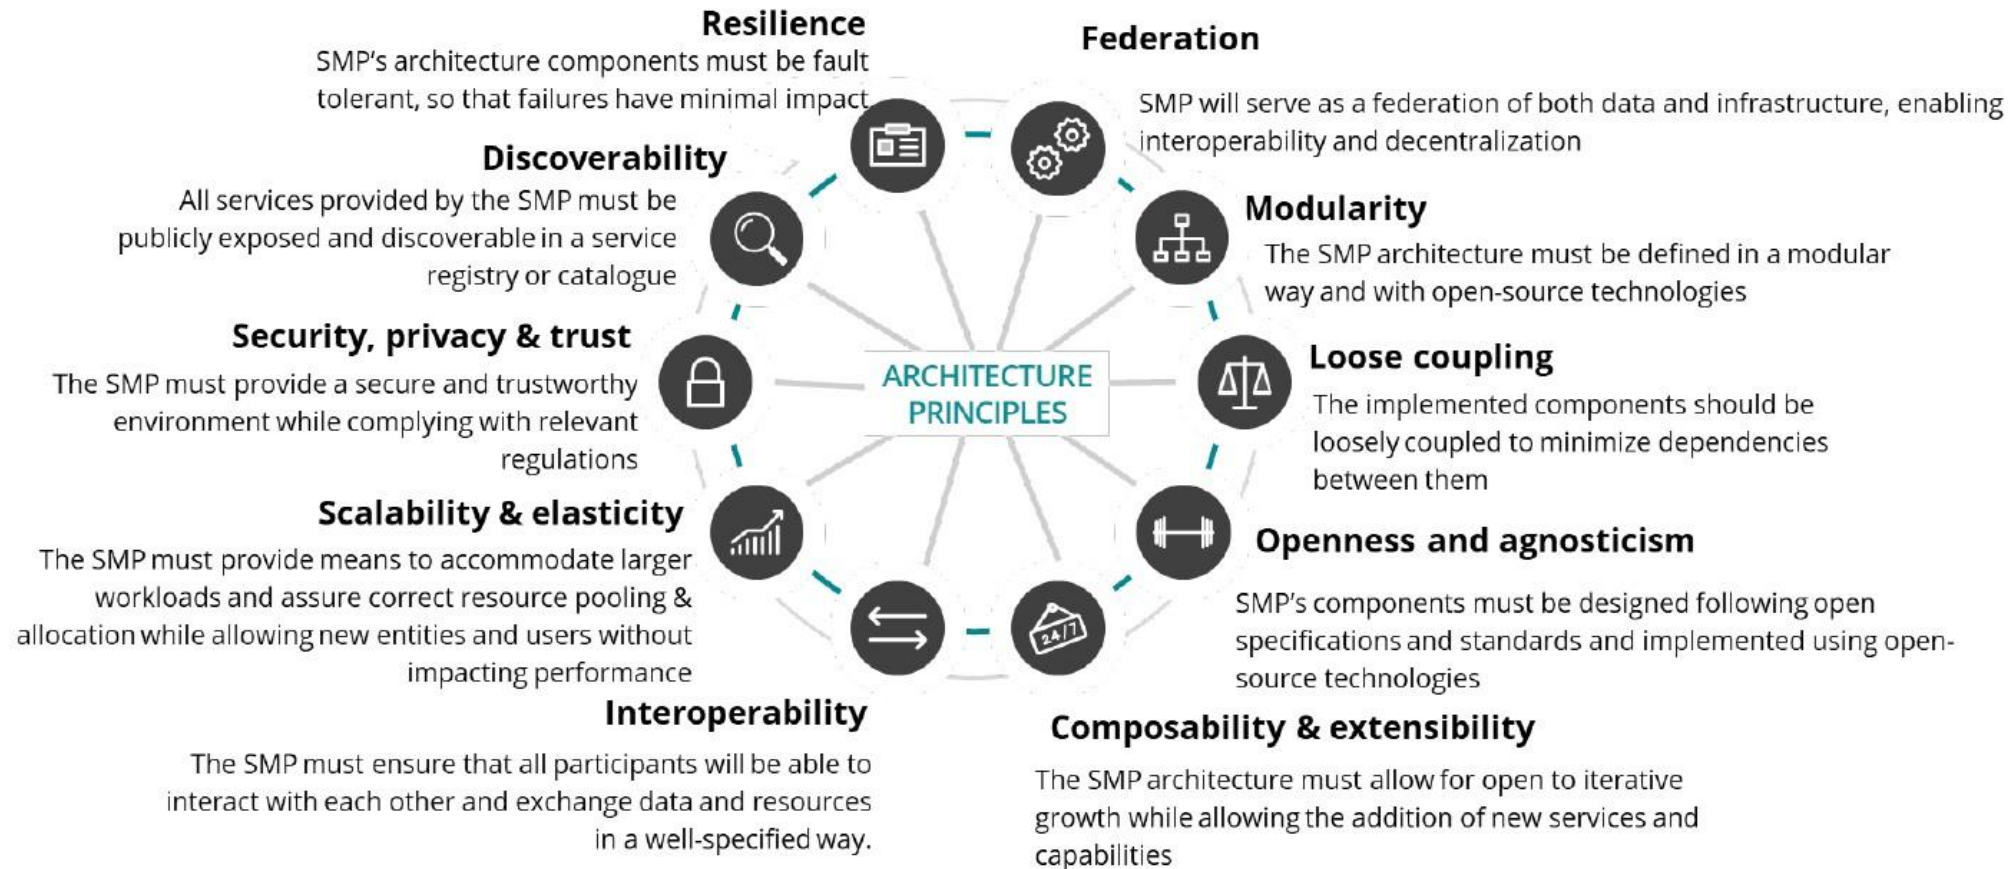

Challenges – III.

- European cities recognise citizen data as a public asset, while they need to ensure citizens' digital rights (personal data management)
- Smart cities strive for portable and affordable, innovative cross-sector services (city-to-city & cross-border)

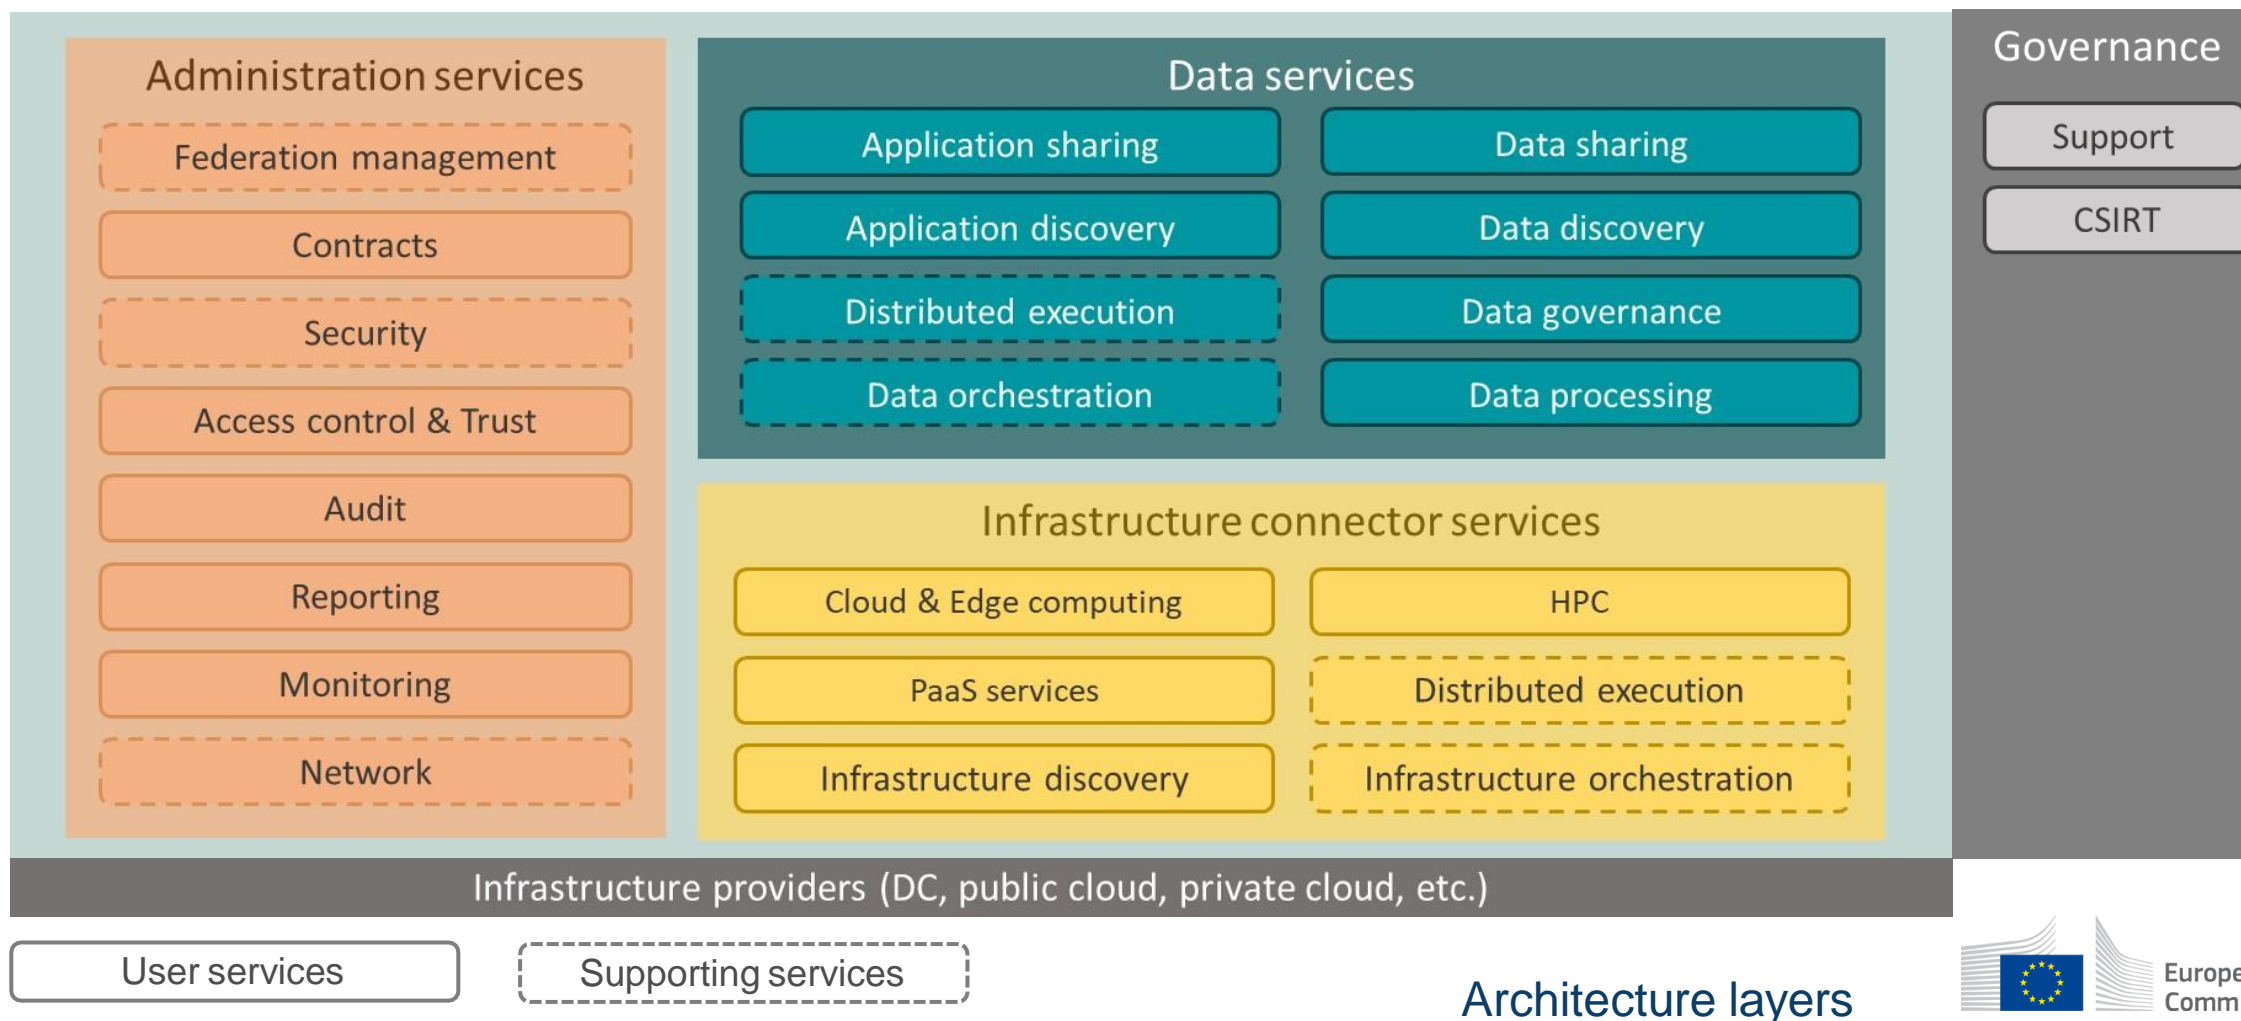

-> From supply focus to demand focus
-> From open data to shared data

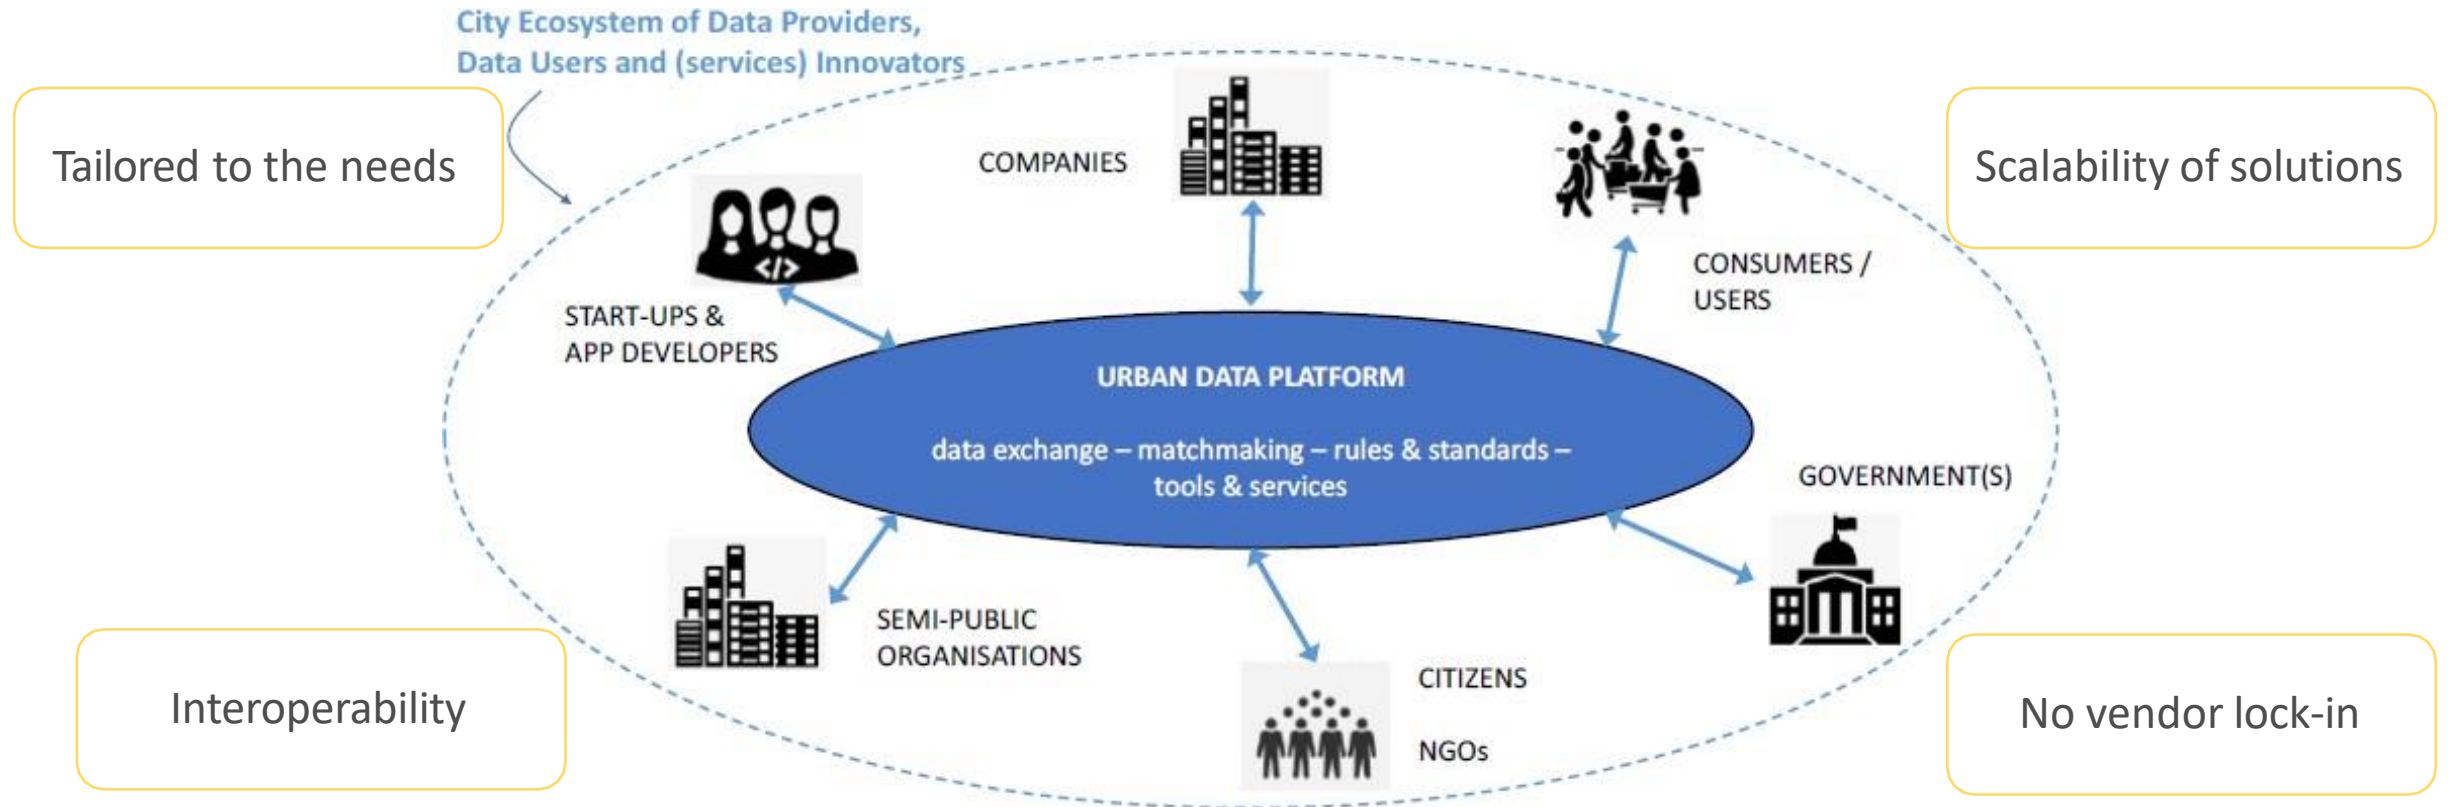

Smart Middleware Platform

SIMPL capabilities

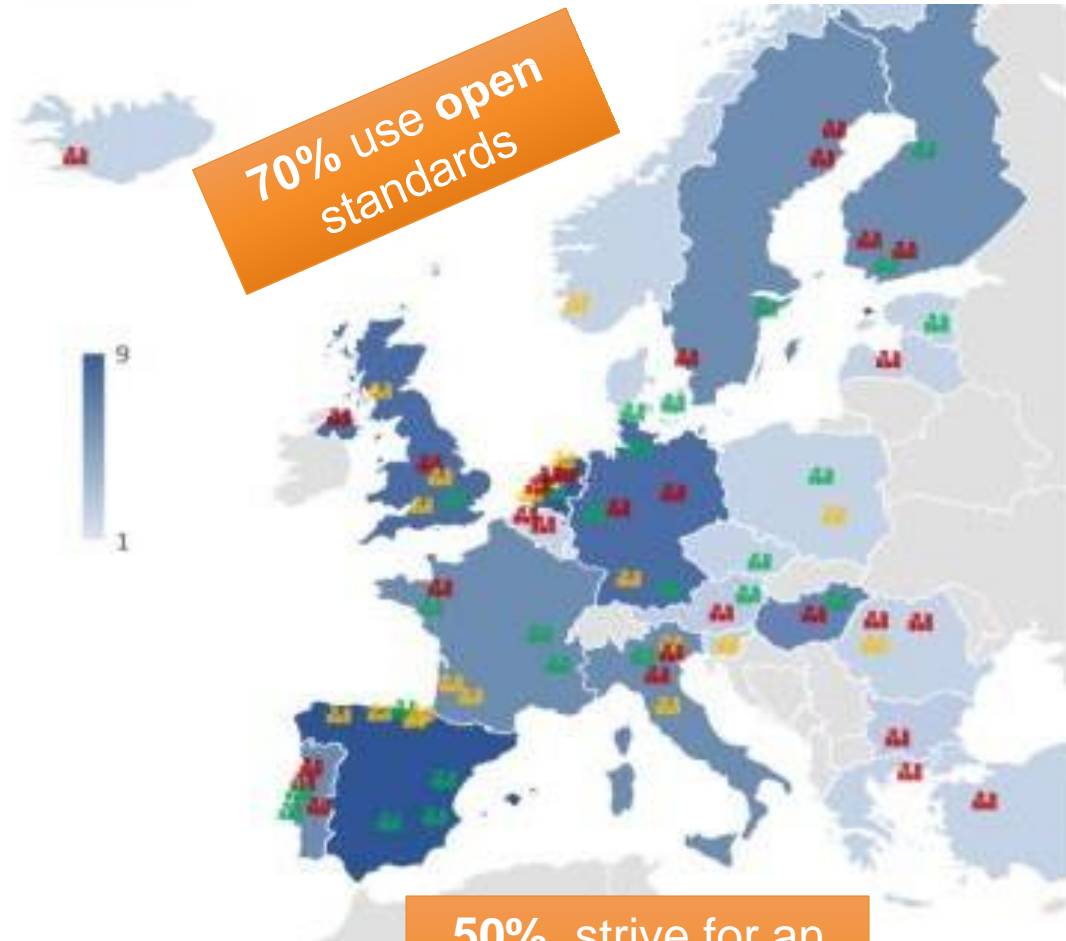

- Political context
- Living-in.EU movement
- Data Space for Smart Cities and Communities
- **Local Data platforms**
- Local Digital Twins

A **Local Digital Platform** is the “operating system” on which digital services can be provided to smart cities and communities, integrating data flows within and across city systems by exploiting modern technologies, such as sensors, cloud services, mobile devices, analytics, etc.

Development of Local Data Platforms in the EU

Source: Research Study on Urban Data Platforms in Europe, ERASMUS Centre for Data Analytics, January 2020

* Based on data gathered from more than 100 respondents in 80 European cities

- Context Information Management
- Common Data Models
- Marketplace Enablers (Ecosystem Transaction Management)
- Personal Data Management
- Fair Artificial Intelligence
- ...and many more to come...

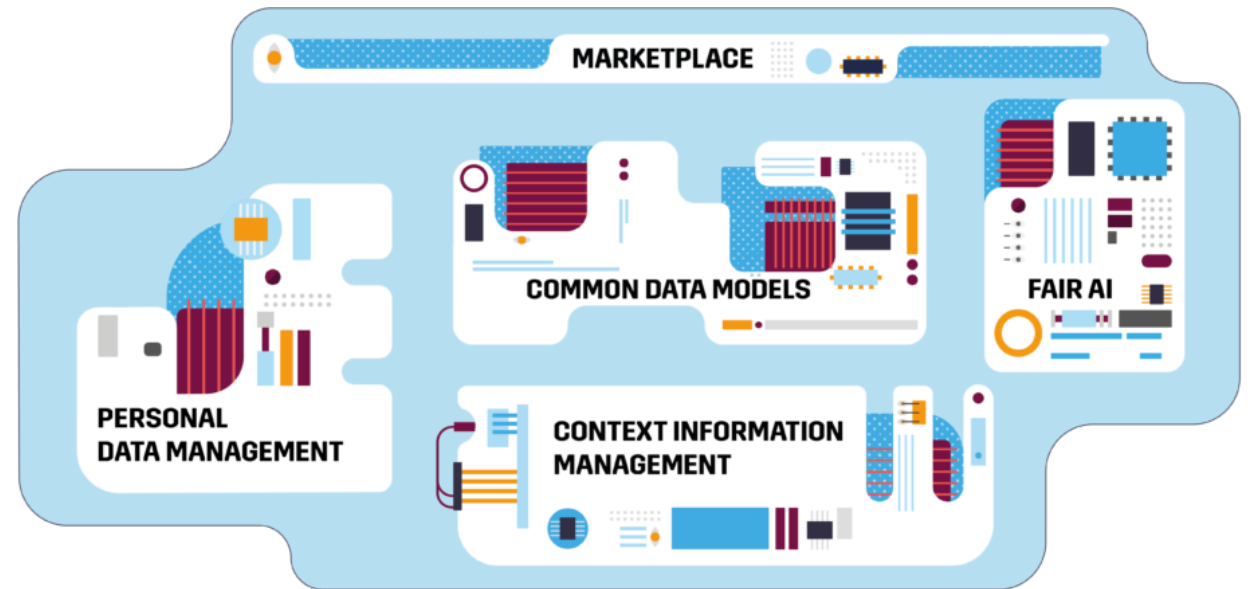

A set of practical capabilities based on open technical specifications that allow cities and communities to replicate and scale solutions globally

Interoperable, standards-based local data platforms

The operating systems of smart cities & communities

- Local Data Platforms (LDP): Enabling digital technologies to integrate data flows via open standards within and across city systems used by both the public and private sector
- LDP can handle open and shared data (with access restrictions) for the dataspaces
- LDPs will deliver the big data for AI (smart objects, sensors, mobile data, social media data, etc.) & LDP digital infrastructure components will enable the use of artificial intelligence and analytics

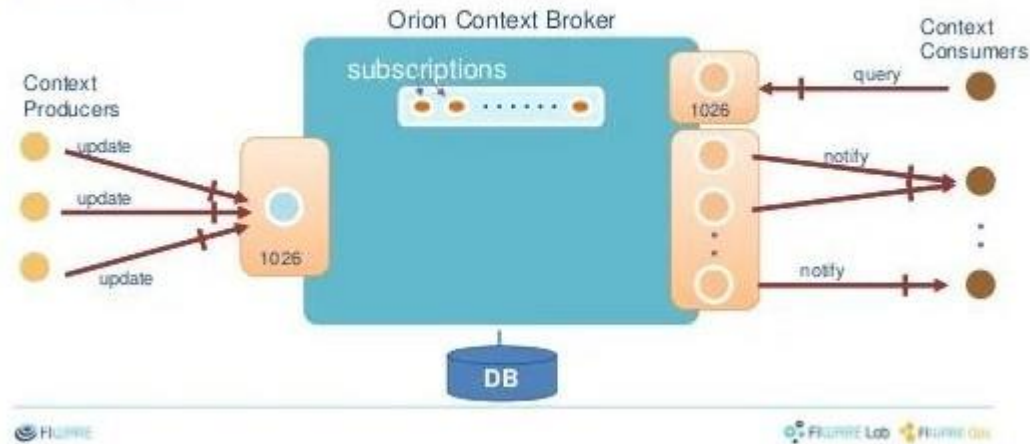

Eindhoven

FIWARE Context Broker GE: Orion

Orion Architecture

Valencia

- Political context
- Living-in.EU movement
- Data Space for Smart Cities and Communities
- Local Data platforms
- Local Digital Twins

- Shared digital workspace, **productivity** and collaboration tools
- **Efficiency and effectiveness** through automated content management and digital workflows
- **Personalised services** by interpreting geographical and temporal data (where and when)
- Public **health** promotion, disease prevention and management
- **Environmental** monitoring (air, noise and water quality, weather monitoring)
- **Public safety**, security, surveillance, monitoring and law enforcement
- Automating operation decisions in **traffic, waste and energy management**
- **Evidence-based policy making**, simulations, modelling, scenario building for strategic decisions

Source: [Smartcitiesworld.net](https://www.smartcitiesworld.net)

- Urban digital twins are the **virtual representation of a city's physical assets, processes and systems**
- Connected to **data** related to those assets facilitates AI algorithms, data analytics and machine learning
- Combining numerous technologies to create digital **simulation models** that can be updated and changed (**real-time**) as their physical equivalents change
- Providing a **risk-free testing environment** that increases the precision of long-term predictions, improves monitoring and impact assessment of certain decisions for the city's ecosystem
- **Possible benefits:** operational efficiencies, cost savings, more informed decisions, adaptation to climate change, increased resilience, effective urban planning and urban infrastructure management, crisis management, effective coordination of emergency services, participatory governance, improved services for citizens and increased safety and security

Urban digital twins can change the way cities are planned, operated, monitored and managed (*'policy-ready-data-as-a-service'**)
'A playground for city planners' **

- Operational decisions (short-term) - reactive

Public safety and crowd dynamics , traffic management, public transport and pedestrian management, facilities management, etc.

- Strategic (long-term) decisions - predictive

Urban planning and development, asset and infrastructure management, environmental and climate monitoring & planning, energy usage and solar deployment, etc.

Local Digital Twins can save USD 280 billion
in city planning, development and operating
plans

(Source: ABI Research)

Local Digital Twins can:

- Reduce operating costs by 35%
- Boost productivity by 20%
- Cut emissions by 50-100%

(Source: CityZenith)

Launching meet up**

Dana Eleftheriadou

19th September 2022

The Intelligent Cities Challenge (ICC)

*Cities leading the green and digital transition of the local
economy and society*

Why cities matter?

The EU consists of more than **80,000** cities and towns

Cities cover

3%

only of the land on Earth

account for

80%

energy consumption

account for

75%

waste & carbon emissions

Cities produce

80%

of GDP

home to more

70%

of EU population

Cities implement

70%

of EU legislation

Cities handle **1/3** of public spending
and manage **2/3** of public investment

Leading the green and digital transition of the local economy and society

The **Intelligent Cities Challenge** initiative brings together an active community of 136 EU cities from 21 countries, representing 34 million EU citizens, to lead the green and digital transformation of their local economy and foster social resilience, leveraging cutting edge technologies and innovation.

It provides cities with clear direction on local industrial and SMEs development that is environmentally sustainable and socially just.

Tailor-made, strategic guidance and expert support, access to city networks, capacity building tools.

ICC

Making the most of
advanced technologies
for Green and Digital
Recovery and Social
Resilience

Access to finance

Innovative and social
public procurement

Open data

Opportunities for Cities

Local Green Deals

- **Local action plans** to support economic, environmental and social sustainability.
- **Join up existing strategies** into a coherent **local alliance** to deliver the EU Green Deal Policy at local level.
- Create **new jobs** and accelerate a new green and fairer recovery.

Technology for Good

- **Technology-powered solutions** and business models designed to advance economic, social and environmental causes.
- To address the most **pressing challenges** with technology.
- Solutions by **local SMEs, researchers, social enterprises and start-ups**.

Up & reskilling of local workforce

- **Local multi-stakeholders partnerships** to implement the **Pact for Skills** at local level.
- Putting in place **tailored, local reskilling network**, involving companies, knowledge institutes, local authorities and citizens.

ICC upcoming events

On 15 and 16 November 2022, we will be coming together in Barcelona, Spain for the ICC Conference and Mayors Forum. This event is only open to cities and experts participating in ICC.

The COVID-19 crisis provided an opportunity for city dwellers and planners to rethink drastically, their consumption, production, living and travelling paradigm towards cleaner, greener, more human lifestyles that also offer new economic opportunities and jobs for their citizens and businesses.

Vision for 2030 - New urban models and call for action

1. Human centric city models
2. Collaborative governance and citizen participation
3. Urban planning, green infrastructure, compactness
4. Clean urban mobility
5. Clean, affordable energy and social housing
6. Sustainable products and services, including sustainable tourism, sustainable public procurement
7. A supportive business environment, data management and Sharing platforms

Policies & Strategies

SmartTourism

Green and resilient

Sustainable Tourism

ICC has been at the core of the post-Covid recovery of the tourism sector challenges

Tourism has been one of the hardest impacted industry in Europe. To boost the tourism recovery, all the initiatives have identified **Digitalisation and Sustainability** as the main pillars.

ICC is one of the best positioned initiatives in Europe to reach directly the local level and at the same time, it has been working to generate bridges and knowledge towards the digital transformation of cities. Local levels need:

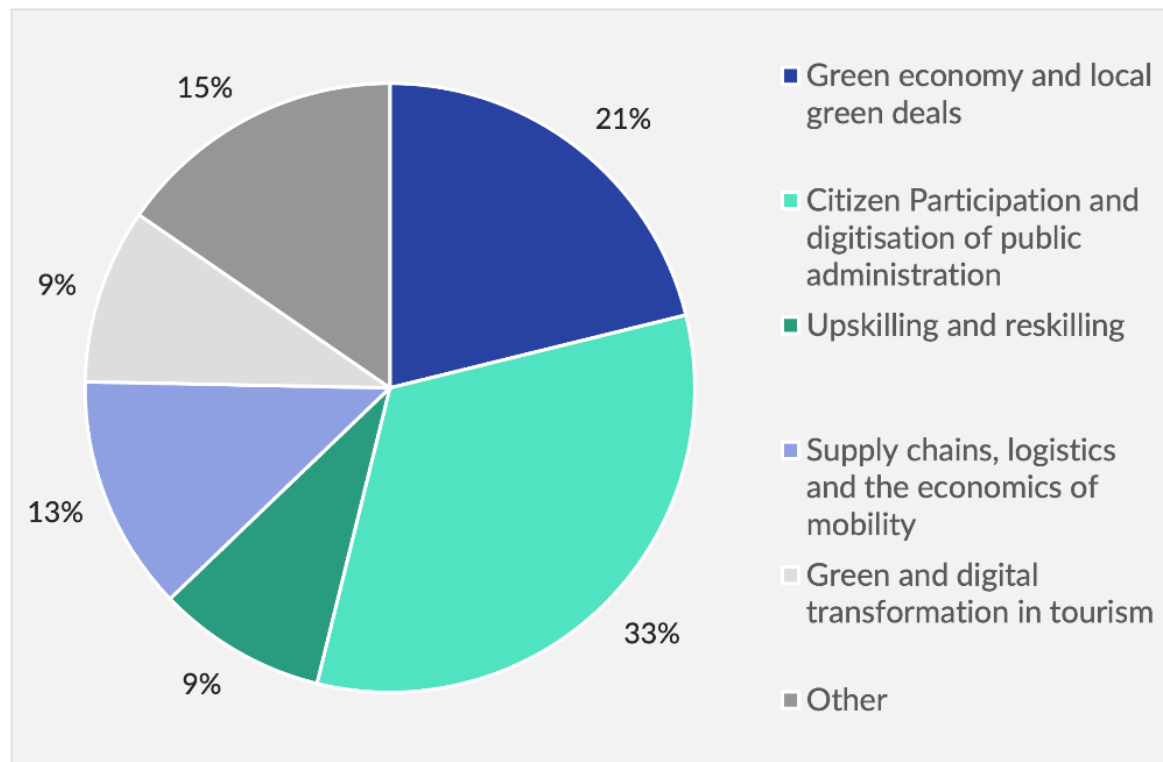

- Mentoring with the cities that have been successful in overcoming any of the present challenges (SMES competitiveness, data management, flows management, tourism attractiveness...)
- But also examples and direct contact with the cities that have been successful in overcoming any of the present challenges

ICC links cities with European tourism initiatives:

- Direct or indirect involvement of ICC in new initiatives, programmes and interests emerged in the post-covid period for Tourism: Tourism transition pathway, Smart Tourism destination, European Tourism Data Space, etc.
- Constantly informing cities on the latest developments

Solutions – volume and split by thematic track

Solutions are in line with the twin transition goals of digitalisation and green transition across thematic tracks, including skills, tourism and mobility

- In total 312 different solutions were launched under ICC (Phase III)
- Each city developed between 1 and 12 solutions, with various scopes.
- The most popular thematic track is “Citizens participation and digitalisation of public administration” with 102 solutions, or 33%, by 47 cities.
- 29 solutions are developed under the “Green and digital transformation in tourism thematic track”, or 9%, by 17 cities.

Solution types common among ICC cities for the “Green and digital transition in tourism” thematic track

Definition and implementation of a tourism strategy

Example: Sustainable and inclusive tourism model (Coastal Towns Association)

Provision of smart tourism infrastructures in strategic places of the city

Example: Smart beach services (Cartagena)

Development of new digital tourism tools and portals

Example: Develop an interactive map app (Arad)

Creation of well-connected tourist-friendly local routes

Example: ECORouTs (Heraklion)

Note: Includes all solutions until Phase III

Different tourism activities were conducted in ICC – Key highlights

Organisation of dedicated tourism sessions during 4 City Labs

Network of recognised Experts in Tourism

Promotion of ICC activities in local tourism meetings

Organisation of Geographical Chapter

Participation of mentor cities, EC representatives, ICC cities and experts

Experts from different EU countries

Promoting the activities implemented in the ICC: FITUR, TIS, BTO Firenze, etc.

3 pillars: Tourism, Role of Data and Local Green Deals

Topics: Tourism data, tourism recovery/ reactivation, Tourism post-covid, green and digital solutions

Supporting the cities in the implementation of their solutions

Sessions dedicated to Access to funding

Challenges and Considerations

ICC thematic track has been challenged:

- ICC lived a pandemic period in which Tourism was the most affected industry.
- Before and after COVID for the Tourism industry: for the destinations, for tourists, for the industry but also for the EC.

Many cities encounter difficulties to:

- involve and coordinate stakeholders
- manage and exploitation of digital infrastructures such as data platforms
- ensure the inclusiveness of the digital solution, avoiding exclusion of customers/businesses without access to IT from Digital Tourism Management plan
- lack of funding, delays in implementation and ensuring the quality delivered by service providers

Additional post-Covid considerations:

- Destinations need a **Tourism Strategy** with an Action Plan to ensure their success in the long term. There is a general lack of plans at destination level.

Trends in the tourism sector reflect its complexity

Data-based tourism:

- **DATA** is key for the future of Tourism but DATA is a general challenge in all cities

Human-based tourism:

- It is important to have in mind that Tourism is an industry made by and for **PEOPLE**.
- One of the main challenges of the destinations is to keep its **authenticity**.

Tourism has strong links with other sectors and synergies with many other industries, importance of managing them correctly:

- Green transformation is of the essence
- Tourism can not be understood without mobility, and connectivity is key to ensure prosperous destinations.
- VR/AR are there to complement the Tourism experience but not to substitute it.

Europe is a worldwide leader in Tourism and new efforts are being dedicated to destinations, companies and people.

Results of the study 'Mastering data by EU tourism destinations'

Carlo Montino, Intellera Consulting

Alfonso Cereza Medina, UMA

**SMART
TOURISM
DESTINATIONS**

Overview

The study provides an **analysis of the state of the art** on the use of **data** in the **tourism sector** in Europe and across the world.

In addition, it offers a series of recommendations to catalyse the use of data by European destinations to improve their tourism offer.

The concept of smart tourism destination

A smart tourism destination facilitates access to tourism and hospitality products, services, spaces and experiences through **ICT-based innovative solutions**, making tourism **sustainable and accessible**, and fully leveraging their **cultural heritage and creativity**

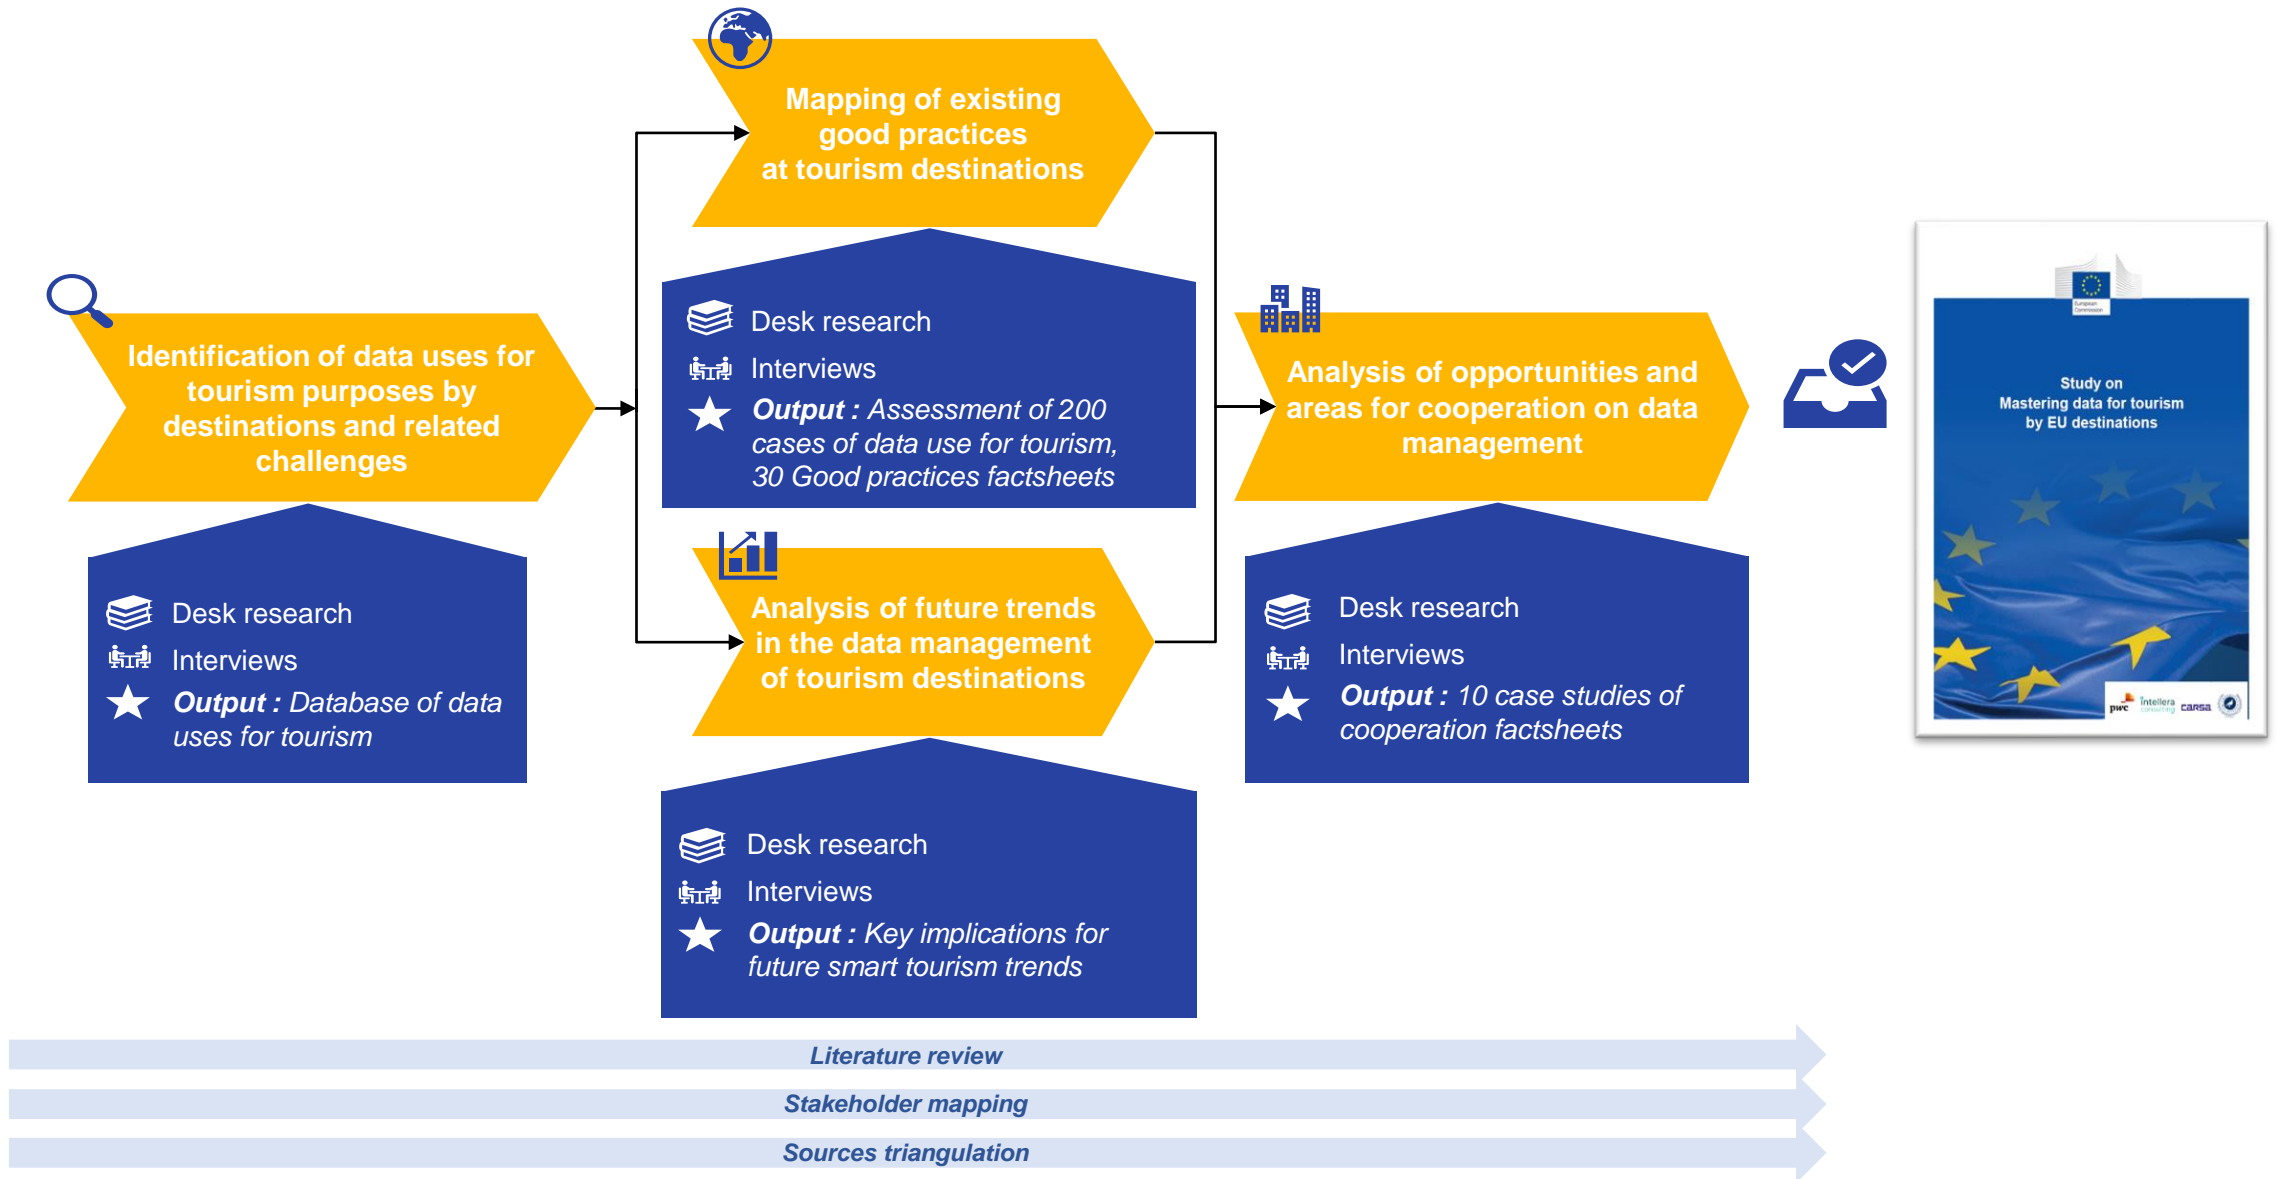

Key areas of analysis of the study

- ✓ Purpose areas of data use
- ✓ Types of data used
- ✓ Types of data users
- ✓ Main challenges
- ✓ Forces driving change
- ✓ Good practices and cooperation examples
- ✓ Recommendations

Available for download on our project website:
<https://smarttourismdestinations.eu/digital-library/>

Methodology

Purpose areas of data use and types of data users

Purpose areas of data use

Improve interaction and engagement with the tourist

Development of **tourism services increasingly personalised and based on a higher degree of interaction** with the customer/end-user.

Conduct market analyses and inform decision-making

Higher availability of data and improved data analytics capabilities allow **improvements in market analysis and decision-making**.

Improve planning and operations of tourism services

Understanding (and possibly predicting) tourism patterns through data can help to **improve the overall efficiency and competitiveness of the tourism ecosystem**.

Increase destinations sustainability and accessibility

Enhanced analysis and management of data can improve the destinations sustainability and accessibility producing **positive impacts on society at large**.

Types of data users

Tourism destinations and public authorities

This includes a wide variety of different entities, from multilevel PAs, to education institutions and cultural heritage sites. In some cases, destinations **mutualise the effort** by establishing partnerships, even cross-border. In larger countries, regional administrations sometimes **launch strategies** involving the entire regional tourism ecosystem.

Private sector – Tourism industry

There is a **wide spectrum of private actors** specialising in the provision of services for the tourism sector: **big vacation rental sites and touristic metasearch engines**, hotel groups, and a growing number of **IT and software companies** offer tourism-specific data-driven and data analytics services.

Private sector - Other

These are private companies not directly related to the tourism sector, but **capable of acquiring or producing high value data sets**. These include for instance telecommunications companies. They usually sell the data they collect to operators in a variety of sectors - including tourism.

Types of data used and sources

User generated data

User-generated content (UGC) is data produced and made available by tourists themselves. UGC can be divided into two main sub-categories: **textual information** (such as reviews, posts, etc.) and **photos** (usually uploaded on social media, including additional information, such as locations, time and tags).

Smart city (pollution,
traffic, waste, etc.)

03

04

Business
information

Statistics

Context specific
information

Device data

The widespread adoption of smart city solutions has paved the way for **tourism-specific measurements and data collection**. Device data can be divided in data collected by devices and sensors that allow the **tracking of movements**, and data collected by **smart city devices and sensors**.

Transaction data

The rise in **cashless payment solutions** – from shops to public transports, accommodation and tourism sites – generates **massive amount of tourism-related commercial data**. Such data is generated **anytime a transaction is performed**, including in **the pre-visit phase**.

Other data

High value data can also come from other sources, including **private businesses datasets** (e.g., data on the number of passengers held by airlines), **statistics** (such as datasets published by public authorities), and **context-specific information** (e.g., the information on the history of a place, which can be used to develop a virtual reality experience).

Forces driving change

Socio-demographic changes

Propensity to remain connected

Boost in lifelong learning

Changes in the purchasing process

Ageing population

Digital natives to become the main consumers of smart tourism

Increased propensity for health tourism

An **ageing population** and progressively **higher rates of digital literacy** represent two defining demographic trends with direct implications for the tourism sector.

Technological progress

Enhancement of mobile networks

Big data technologies

Cloud computing

Increased data connectivity

Voluntary data capture and profiling

Evolution in IoT

Combination of AI and AR

Data interoperability and re-use

Increasing awareness of data ownership

Robotics for tourism

Biometric for personal identification

Cyber security and blockchain

The growth of connectivity and distributed infrastructures are making **digital transformation increasingly accessible and capillary**. Data represent the key fuel for most of these forces.

Sustainable development

Changes of travellers' behaviour due to the COVID-19 pandemic

Increasing sharing economy

Growth of green tourism

Increase in the number of digital nomads and remote workers

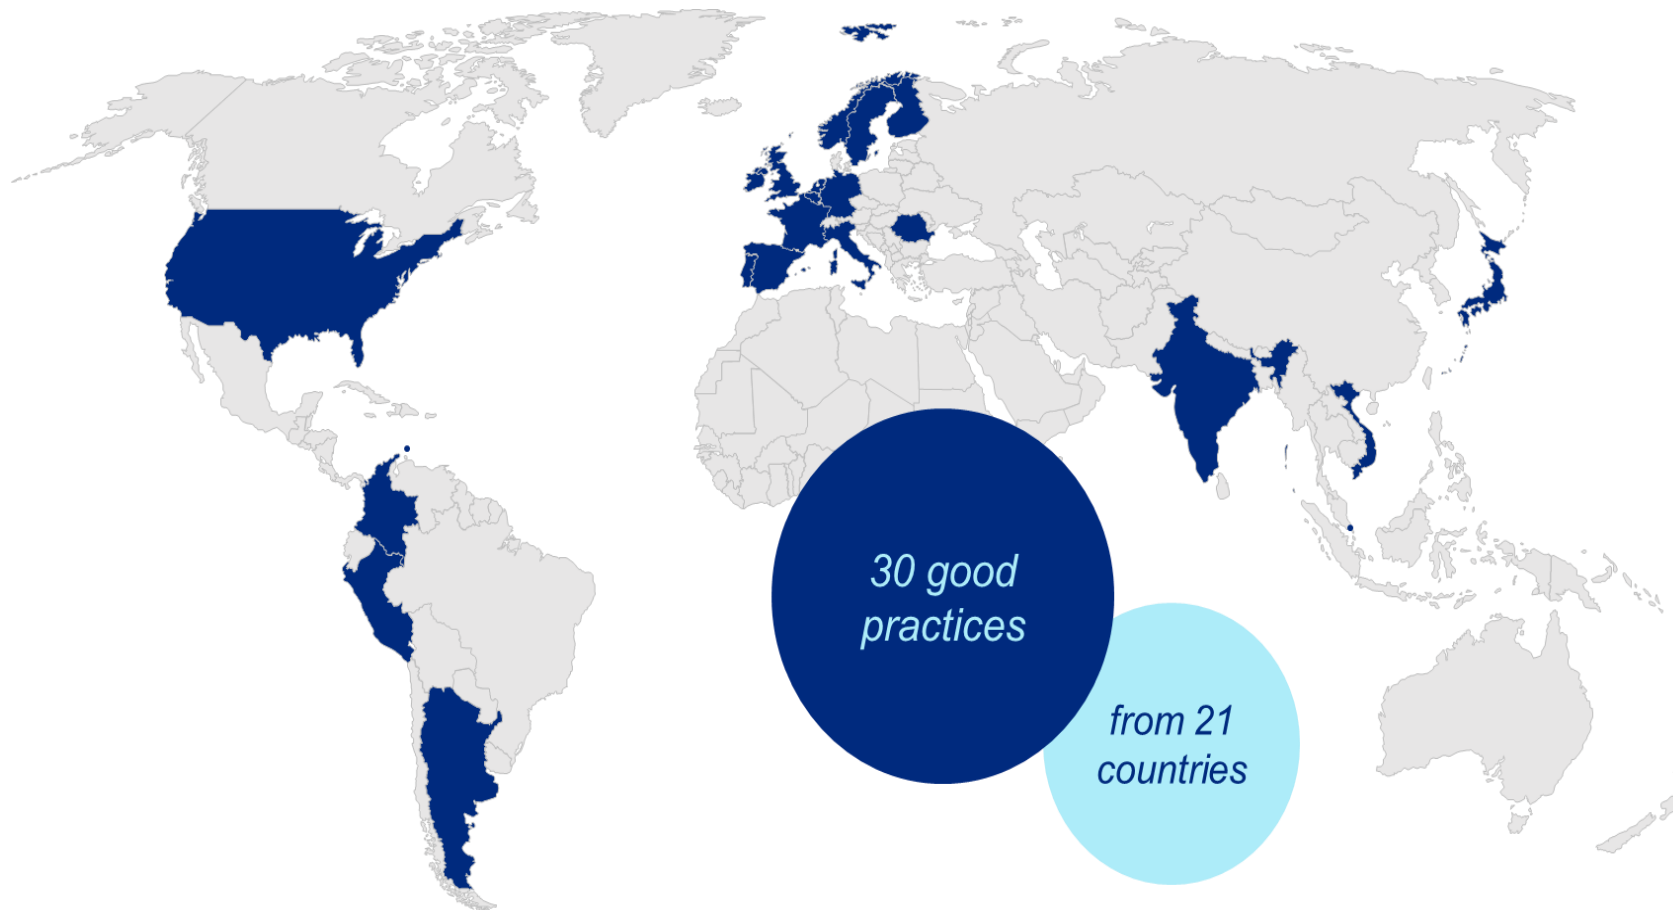

Low cost business models

New business models

Already occurring before the COVID-19 crisis, these forces are expected to drive change towards a **more inclusive, economically and environmentally sustainable sharing economy**.

Smart Tourism good practices

The study team assessed **nearly 200 instances of data uses** for tourism across the world. Out of these, **30 instances of particular interest have been selected as good practice**, and **10 notable cases of successful cooperation** between different destinations have also been identified.

For instance... Venice developed a smart system to monitor the influx of individuals based on sensors, cameras and mobile phone data. Sensors – strategically placed at the key intersections and squares – allow to detect the transit of pedestrians. Similarly, cameras provide real-time images of crowds and flows. Finally, mobile phone data allows to track the movements – and other pieces of information such as the region of origin – of individuals. Such a comprehensive monitoring system allows the city to assess both historical and real-time flows, and enables the modelling of physical phenomena such as crowds in specific areas at specific times.

Recommendations

Governance

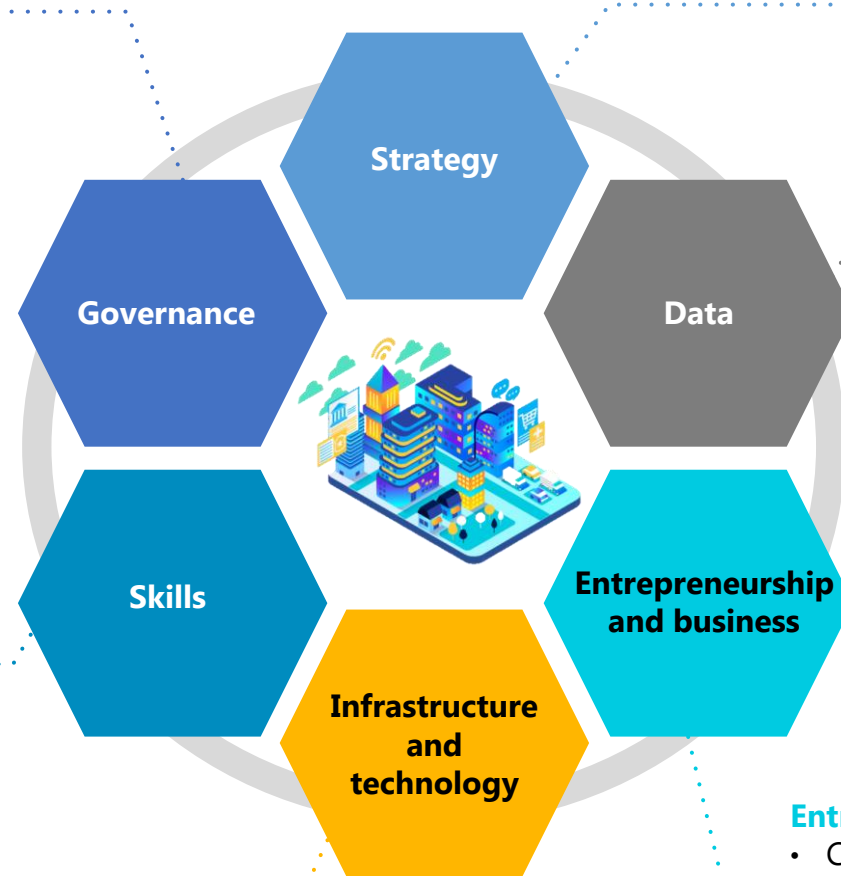

- Create an innovation and enabling environment
- Appoint a dedicated team or officer with responsibility for smart tourism
- Build a data sharing culture among stakeholders

Skills

- Ensure the involvement of a balanced mix of skills
- Source/train the required skills
- Enhance skills through collaborations
- Support cultural change

Infrastructures and technology

- Open APIs
- Set up a scalable and flexible IT infrastructures

Strategy

- Prepare a data strategy and execution plan
- Specialise on targeted groups
- Use data to inform the policy cycle

Data

- Exploit available context-specific information and statistics
- Ensure the availability of a data sharing platform
- Invest on metadata management
- Develop a strategy for external data acquisition
- Establish a set of indicators
- Respect data privacy and security concerns
- Build a data sharing culture (e.g. adhere to the Code of Conduct for data sharing in tourism, share data in the European Tourism Data Space)

Entrepreneurship and business

- Catalyse the digital transformation of tourism businesses
- Encourage uptake and investment in new digital technologies by tourism businesses

The Destinations Journey and the Community of Practice

Costanza Bersani, Intellera

Silvia de la Maza, CARSA

Overview of our goals and objectives

Specific objective

Support selected destinations with **general and tailor-made capacity building activities**

How

We will provide you a set of **training and coaching activities** to improve your data-driven smart tourism capacity

Each selected destination will also be supported by a Smart Tourism Expert

Final objective

Support EU destinations to adopt data-driven approaches to become or improve as Smart Tourism Destinations

Specific objective

Establish a **network of tourism destination and other stakeholders** to meet and share their knowledge, experiences and solutions

How

We will organize a **series of webinars to foster knowledge sharing** and **set up and animate a LinkedIn group to foster networking**

The 5 Key Pillars of a Smart Tourism approach

The **training and coaching activities** and the **events open to the community of practice** will support you becoming or improving as a Smart Tourism Destinations based on the **5 key pillars we identified as the basis of a Smart Tourism Approach**

Transversal topics: *assessing your as is situation + procurement, funding and financing*

Type of activities

Launching event

Key goals:

- Build up the community and share the project goals and activities
- Share the latest updates from the EC initiatives and policies
- Discuss challenges, opportunities, and insights on Smart Tourism

Webinars

Online appointments **deep diving with experts and invited speakers on the five pillars of a Smart Tourism approach**, sharing insights and use case.

The webinars will include Q&A sessions.

Workshops

Online workshops to support destinations in their journey, providing **guidance on how to improve under the different pillars** making up a Smart Tourism approach, how to build their roadmap, and on transversal relevant topics.

Coaching activities

Ad-hoc individual coaching sessions for each destination, to support you assessing your as-is situation, identify key actions to get Smart(er) and work on your Smart Tourism Destination's roadmap.

Online Peer learning & matchmaking

Online events to **foster networking, knowledge sharing, and matchmaking**. These appointments will closely linked to the other capacity building activities.

Activities open to the external stakeholders and the wider community of practice

Tailored capacity building and networking activities for selected destinations

The Road ahead (1/2)

Our Destination's Journey has started in May, with the virtual kick-off. News and materials available on our website!

Today & tomorrow!

Sharing our goals and introducing our key tools: the study, the guide, and the toolkit, plus the self-assessment

October
Week 3

The Smart Tourism Maturity self-assessment: setting the basis to get Smart(er) (*The self-assessment*)

November
Week 1

Smart Tourism visions and ambitions: emerging strategies and governance models (*Pillar 1*)

November
Week 3

Get inspired and pick up new tools: innovative technologies and smart solutions for tourism (*Pillar 2*)

December
Week 1

Develop your strategy and prioritise specific data-driven actions for your Smart Tourism Destination (*Pillars 1 and 2*)

January
Week 3

The future of work: new skills and profiles for Smart Tourism and how to get ready (*Pillar 3*)

February
Week 2

Opportunities and tools for data and knowledge sharing: latest trends and possible solutions in Smart Tourism (*Pillar 4*)

Recap of the Destination's Journey structure (1/2):

- The initial coaching session will support you **setting the basis for the Journey** and will focus on the Smart Tourism Self-Assessment. More on this tomorrow!
- Each of the 5 Smart Tourism pillars will be covered during a dedicated **webinar, open to external stakeholders, to explore the topic, share insights and latest trends, and learn** from the experts and speakers
- During the **workshops** selected destinations will work together on **how to improve under the different pillars** covered in the previous webinars

Data Driven Destination (in 5 steps)

Big Data vs Small Data

don't rely *only* on quantitative data...

Everything is “Tourism”

Everything is measurable?

A photograph of a diverse group of people, mostly young adults, standing in a line and looking at their smartphones. The image is slightly blurred, emphasizing the collective behavior. A dark semi-transparent banner is overlaid on the left side of the image.

find a proxy for what it is not...

Empower stakeholders through DATA

Good Choice
Bad Choice

The importance of (good) governance for being a Smart Tourism Destination

Dagmar Lund-Durlacher

Eberswalde University for Sustainable
Development, Austria

Launching Meet Up!
Brussels, 19 – 20 September 2022

Characteristics of Smart Destinations

The **strategic objectives** are broadened to focus not only on **economic development**, but also include **sustainable development, responsible resource management, improving the quality of life, and enhancing the well-being of stakeholders and the local community**. **Strategic goals** may be:

- 🎯 Add value to businesses, residents, and tourists.
- 🎯 Focus on value and experience co-creation.
- 🎯 Spread visitors in time and space.
- 🎯 Enhance place (destination) for residents and tourists (e.g., infrastructure)
- 🎯 Enhance well-being of community

Developing and **implementing** a smart tourism strategy requires **efficient** and **collaborative governance** that takes into account the input and views of all stakeholders.

Smart destinations gain insights from available data, monitor progress toward strategic goals, and use it to make **strategic adjustments**.

Governance of Smart Destinations

- Smart destinations are networks of **interconnected stakeholders** with various relationships between them. Destination stakeholders collaborate in sharing and distributing data to develop the smart destination.
- Cross-sector and cross-level **collaboration** to capitalize on initiatives in other sectors and/or at a higher regional level.
- Collaboration of local authorities and the destination management organization (DMO).
- DMOs should transform from marketing organizations to **leading destination stewardship organizations** taking a leadership role by **encouraging** destination stakeholders to work together and facilitating collaboration.
- Their work should be based on a mandate that includes **stakeholder management**, **tourism product development**, and **knowledge sharing**.
- Smart DMOs should become **data hubs** and **data mining organizations**.

Performance indicators

Data Availability

The **availability** and **openness of data** is the most important prerequisite for **developing a comprehensive set of indicators**.

It would also be useful to integrate tourism data with data from other sectors (e.g., transport, cultural heritage).

Tourism Statistics

Needs to be **improved** from basic statistics on travel and overnight stays to data on the social, environmental, and economic impacts of tourism.

A new set of indicators should focus on the **measurement of the quality** of the tourism experience, the quality of life and well-being of residents, and business performance, carrying capacity management, and resource use and environmental impacts.

(Such indicators are currently being developed as part of the EU Tourism Dashboard initiative)

Performance indicators and communicating **immediately** with all stakeholders are **critical**.

Sharing KPIs helps maintain **stakeholder engagement**.

What approaches and methods do you see for engaging stakeholders in tourism development?

Stakeholder processes have to be **open to everyone**, all stakeholder groups have to be **included** - different ways to approach and include their views.

Example Vienna

The Vienna Tourist Board has established **discussion forums** for information sharing, reflection, and strategy development at various levels. Participation in these facilitated dialogues is open to anyone wishing to work on fulfilling the vision.

The VTB's *Shaping* and the *B2B Services Website* are the central **destination management communication platforms** which allow to share information and give stakeholders the possibility to make suggestions.

Surveys of visitors and Viennese residents give regular indicators of sentiment and provide information on specific requirements and issues. Important customer touch points are specifically analysed to continuously improve offerings and services

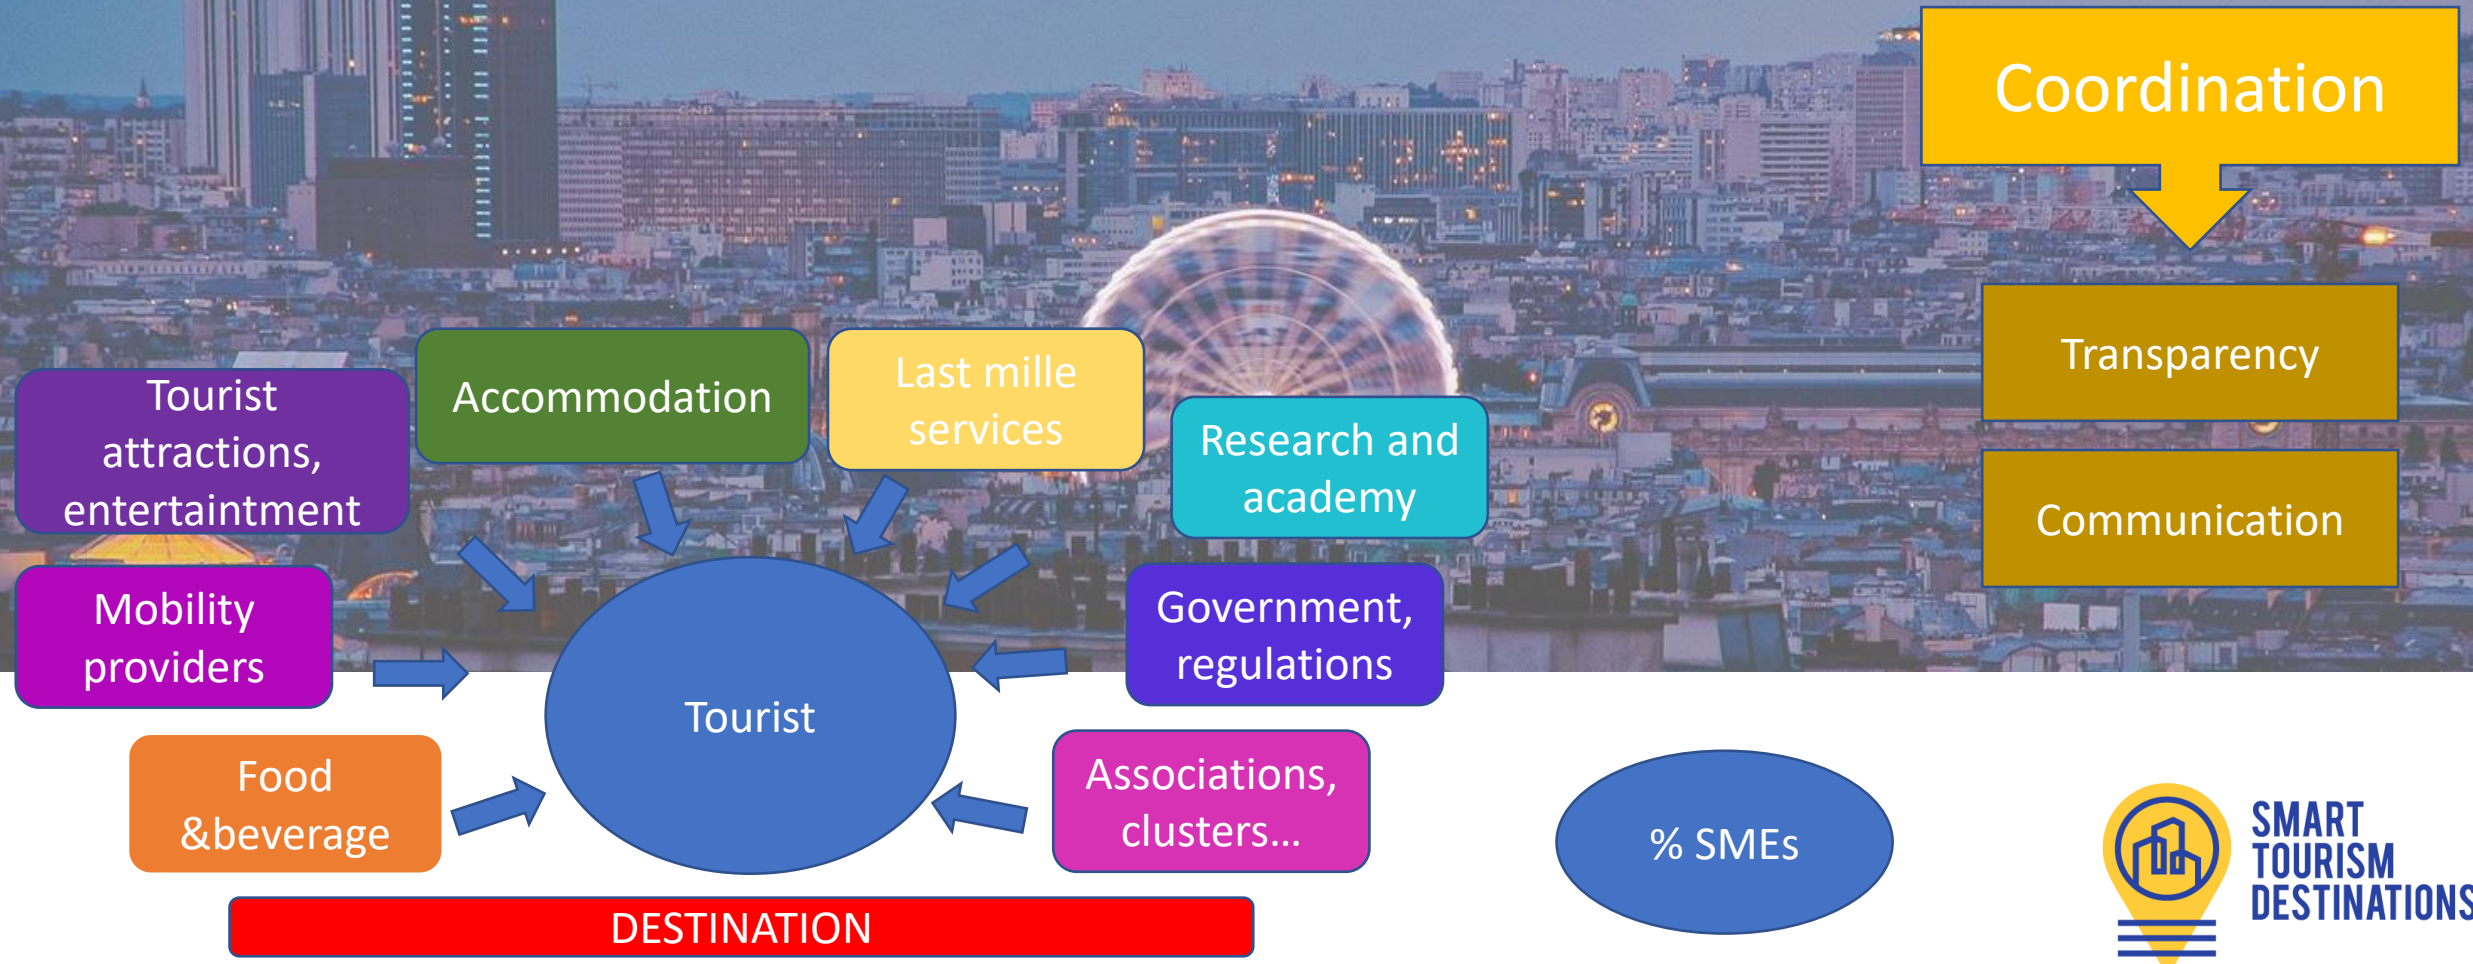

SMART
TOURISM
DESTINATIONS

Why partners and people are key in the management of a Smart Tourism Destination

Dolores Ordóñez
Director
AnySolution

The importance of the ecosystem

The aim: increase the Tourism experience

- People at the center
- Skills
- Becoming a Smart Tourism Destination as a journey

Skills & talent

- Ecosystem Management
- High skills in the whole Tourism value chain
- Attraction of talent: for the destination, as new Business model

Be prepared to become Smart

- What does it mean to be Smart?
- Who will be involved?
- Which are the aims?
- Which are the pains?
